*(Handwritten signatures and dates)*

## Course structure of Five Year M. Sc. Integrated (Physics Stream) Effective from July, 2022

- Minimum total credits for integrated M.Sc. degree is 240.
- Semesters I to VIII will carry 25 credits each.
- Semesters IX and X will carry 20 credits each.

Abbreviation: B: Biology, C: Chemistry, M: Mathematics, P: Physics, G: General, H: Humanities, BL: Biology Laboratory, CL: Chemistry Laboratory, PL: Physics Laboratory, GL: General Laboratory, PE: Physics Elective, PPr: Physics Project

### FIRST YEAR

#### SEMESTER -I

Subject Code	Subject	Contact Hours / Week [Theory+Tutorials]	Credits
B101	Biology - I	[2 + 1]	3
C101	Chemistry - I	[2 + 1]	3
M101/MB101	Mathematics - I	[2 + 1]	3
P101	Introductory Physics - I	[2 + 1]	3
G101	Computer Basics	[2 + 1]	3
H101	Communication Skills	[2]	2
Contact Hours /Week Laboratory			
BL101	Biology Laboratory - I	[4]	2
CL101	Chemistry Laboratory - I	[4]	2
PL101	Physics Laboratory - I	[4]	2
GL101	Computer Laboratory	[4]	2
(25 of 240 credits)			25
<b>Additional Papers</b>			
ES101	Environmental Studies	[2]	2

#### SEMESTER -II

Subject Code	Subject	Contact Hours / Week [Theory+Tutorials]	Credits
B201	Biology - II	[2 + 1]	3
C201	Chemistry - II	[2 + 1]	3
M201/MB201	Mathematics-II	[2 + 1]	3
P201	Introductory Physics - II	[2 + 1]	3
G201	Electronics and Instrumentation	[2 + 1]	3
Contact Hours /Week Laboratory			
BL201	Biology Laboratory - II	[4]	2
CL201	Chemistry Laboratory - II	[4]	2
PL201	Physics Laboratory - II	[4]	2
GL201	Electronics Laboratory	[2]	2
H201	Communication Skills Lab	[4]	2
(50 of 240 credits)			25
<b>Additional Papers</b>			
ES201	Environmental Studies	[2]	2

*7 June 2022*

## SECOND YEAR

### SEMESTER - III

Subject Code	Subject	Contact Hours / Week [Theory+Tutorials]	Credits
P301	Mathematical Physics - I	[3 + 1]	4
P302	Classical Mechanics - I	[3 + 1]	4
P303	Electromagnetism	[3 + 1]	4
P304	Waves and Oscillations	[3 + 1]	4
H301	Creative Hindi	[2 + 0]	2
H302	History and Philosophy of Science	[2 + 0]	2
		Contact Hours /Week Laboratory	
PL301	Physics Laboratory - III	[6]	3
GL301	Applied Electronics Laboratory	[4]	2
(75 of 240 credits)			25

### SEMESTER -IV

Subject Code	Subject	Contact Hours / Week [Theory+Tutorials]	Credits
P401	Mathematical Physics - II	[4 + 1]	5
P402	Quantum Mechanics - I	[4 + 1]	5
PCB401	Physical and Chemical Kinetics	[3+1]	4
G401	Statistical Techniques and Applications	[3+1]	4
		Contact Hours /Week Laboratory	
PL401	Physics Laboratory-IV	[6]	3
GL401	Computational Laboratory and Numerical Methods	[4]	2
H401	Communication Skills Lab-II	[4]	2
(100 of 240 credits)			25

## THIRD YEAR

### SEMESTER - V

Subject Code	Subject	Contact Hours / Week [Theory+Tutorials]	Credits
P501	Quantum Mechanics - II	[4 + 1]	5
P502	Classical Mechanics - II	[4 + 1]	5
P503	Atomic and Molecular Physics	[3 + 1]	4
PM501	Numerical Analysis	[3 + 1]	4
H501	Scientific Writing in Hindi	[2]	2
		Contact Hours /Week Laboratory	
PL501	Physics Laboratory - V	[6]	3
PML501	Numerical Methods Laboratory	[4]	2
(125 of 240 credits)			25

### SEMESTER - VI

Subject Code	Subject	Contact Hours / Week [Theory+Tutorials]	Credits
P601	Electrodynamics	[4 + 1]	5
P602	Statistical Mechanics - I	[4 + 1]	5
	Computational Physics - A ( only for SEMESTER-IV students of session 2021-22 )	[4 + 1]	
P603	Condensed Matter Physics - I	[3 + 1]	4
P604	Lasers	[3 + 1]	4
H601	Ethics of Science and IPR	[2]	2
H602	Scientific Writing in English	[2]	2
		Contact Hours /Week Laboratory	
PL601	Physics Laboratory - VI	[6]	3
(150 of 240 credits)			25

## FOURTH YEAR

### SEMESTER - VII

Subject Code	Subject	Contact Hours / Week [Theory+Tutorials]	Credits
P701	Astronomy and Astrophysics - I	[3 + 1]	4
P702	Quantum Mechanics - III	[3 + 1]	4
P703	Statistical Mechanics - II	[3 + 1]	4
P704	Nuclear Physics - I	[3 + 1]	4
	Computational Physics - B (only for SEMESTER-VI students of session 2021-22)	[3 + 1]	
		Contact Hours / Week Laboratory	
PL701	Advanced Physics Laboratory - I	[10]	5
PPr701	Reading Project	[8]	4
(175 of 240 credits)			25

### SEMESTER - VIII

Subject Code	Subject	Contact Hours / Week [Theory+Tutorials]	Credits
PS01	Astronomy and Astrophysics-II	[3 + 1]	4
PS02	Fluid Mechanics	[3 + 1]	4
PS03	Nuclear and Particle Physics	[3 + 1]	4
PS04	Condensed Matter Physics - II	[3 + 1]	4
		Contact Hours / Week Laboratory	
PLS01	Advanced Physics Laboratory - II	[10]	5
PPrS01	Project	[8]	4
(200 of 240 credits)			25

## FIFTH YEAR

### SEMESTER- IX

Subject Code	Subject	Contact Hours / Week [Theory+Tutorials]	Credits
PPr901	Project		20
(220 of 240 credits)			20

### SEMESTER- X

Subject Code*	Subject	Contact Hours / Week [Theory+Tutorials]	Credits
PE - 1	Quantum Field Theory	[4 + 1]	5
PE - 2	General Relativity and Cosmology	[4 + 1]	5
PE - 3	Experimental Techniques	[4 + 1]	5
PE - 4	CCD Imaging and Spectroscopy	[4 + 1]	5
PE - 5	Biophysics	[4 + 1]	5
PE - 6	Particle Physics	[4 + 1]	5
PE - 7	Nonlinear Dynamics and Chaos	[4 + 1]	5
PE - 8	Reactor Physics and Radiation Science	[4 + 1]	5
PE - 9	Accelerator Physics and Applications	[4 + 1]	5
PE - 10	Computational Physics - C	[4 + 1]	5
PE - 11	Glimpses of Contemporary Sciences	[4 + 1]	5
PE - 12	Earth Science and Energy & Environmental Sciences	[4 + 1]	5
PE - 13	Circuits and Electronics	[4 + 1]	5
(240 of 240 credits)			20

\*Four Subjects will be offered according to the availability of instructors and minimum number of interested students taking a course. The chosen four subject will have codes PE1001, PE1002, PE1003 and PE1004.

## Scheme of examination (Physics Stream)

### Integrated M.Sc. Semester – I

Subject Code	Subject	Internal Marks		External Marks		Total Marks Max	Credit
		Max	Min	Max	Min		
B101	Biology - I	60	24	40	16	100	3
C101	Chemistry - I	60	24	40	16	100	3
M101/MB101	Mathematics - I	60	24	40	16	100	3
P101	Introductory Physics- I	60	24	40	16	100	3
G101	Computer Basics	60	24	40	16	100	3
H101	Communication Skills	60	24	40	16	100	2
<b>Practical</b>							
BL101	Biology Laboratory-I	60	24	40	16	100	2
CL101	Chemistry Laboratory-I	60	24	40	16	100	2
PL101	Physics Laboratory-I	60	24	40	16	100	2
GL101	Computer Laboratory	60	24	40	16	100	2
<b>Additional Papers</b>							
ES101	Environmental Studies	60	24	40	16	100	2

### Integrated M.Sc. Semester – II

Subject Code	Subject	Internal Marks		External Marks		Total Marks Max	Credit
		Max	Min	Max	Min		
B201	Biology - II	60	24	40	16	100	3
C201	Chemistry - II	60	24	40	16	100	3
M201/MB201	Mathematics-II	60	24	40	16	100	3

## SEMESTER- I

### 1.1 P101: Introductory Physics-I (For all streams)

#### UNIT - I

The Relation of Physics to Other Sciences: Chemistry, Biology, Astronomy, Geology, Psychology  
Conservation of Energy: What is energy?, Gravitational potential energy, Kinetic energy, Other forms of energy, Characteristics of Force: What is a force?, Friction, Molecular forces, Fundamental forces, Fields, Pseudo forces, Nuclear forces

#### UNIT - II

The Harmonic Oscillator: harmonic oscillator, Harmonic motion and circular motion, Initial conditions, Forced oscillations, Resonance: Complex numbers and harmonic motion, The forced oscillator with damping, Electrical resonance, Resonance in nature

#### UNIT - III

heat: Equilibrium and the zeroth law: temperature, Calibrating temperature, Absolute zero and the Kelvin scale, Heat and specific heat, Phase change, Radiation, convection, and conduction, Heat as molecular kinetic energy, Boltzmann's constant and Avogadro's number, Microscopic definition of absolute temperature

#### UNIT - IV

Thermodynamics: Statistical properties of matter and radiation, Thermodynamic processes, Quasi-static processes, The first law of thermodynamics, Specific heats:  $c_v$  and  $c_p$ , Cycles and state variables, Adiabatic processes, The second law of thermodynamics, The Carnot engine, Defining T using Carnot engines

#### UNIT - V

Entropy and Irreversibility: Entropy, The second law: law of increasing entropy, Statistical mechanics and entropy, Entropy of an ideal gas: full microscopic analysis, illustration of maximum entropy principle, Gibbs formalism, third law of thermodynamics

#### Suggested Texts and References:

1. Text Book for UNIT-I and II: "The Feynman lectures in Physics" volume 1, by R. P. Feynman, R. B. Leighton, M. Sands.

2. **Text Book for UNIT - III, IV and V:** "Fundamentals of Physics I – Mechanics, Relativity, and Thermodynamics (Open Yale Courses)" by R. Shankar
3. **References:** "An introduction to mechanics", by D. Kleppner and R. Kolenkow.
4. "Mechanics", by Charles Kittel, Walter D. Knight and Malvin A. Ruderman, Berkeley Physics Course Volume 1.
5. "Waves", by F. S. Crawford, Berkeley Physics Course Volume 3.
6. Thermodynamics, Kinetic theory and Statistical Thermodynamics, 3rd Edition, F. W. Sears and G. L. Salinger, Narosa Publishing House, 1998.
7. Heat and Thermodynamics, 8th Edition, M. W. Zemansky and R. H. Dittman, Tata McGraw – Hill Education, 2011.
8. University Physics, 7th Edition, Francis W. Sears, Mark Zemansky and Hugh D. Young, Massachusetts: Addison Wesley, 1987.

## 1.2 PL101: Physics Laboratory – I

Introduction to experimental physics – conceptual and procedural understanding, planning of experiments; Plots (normal, semi-log, log-log); uncertainty / error in measurements and uncertainty / error analysis. Introduction to measuring instruments – concepts of standards and calibration; determination of time periods in simple pendulum and coupled strip oscillator system with emphasis on uncertainty in the measurements and accuracy requirements; study of projectile motion – understand the timing requirements; determination of surface tension of a liquid from the study of liquid drops formed under the surface of a glass surface; determination of Young's modulus of a strip of metal by double cantilever method (use of travelling microscope); study of combination of lenses and nodal points and correspondence to a thick lens; study of thermal expansion of metal – use of thermistor as a thermometer; measurement of small resistance of a wire using Carey- Fosterbridge and determine electrical resistivity of the wire; study of time dependence of charging and discharging of capacitor using digital multimeter – use of semi-log plot.

### Suggested Texts and References:

1. Advanced Practical Physics for Students, B. L. Worsnop and H. T. Flint, Methuen and Co. Ltd., London

## SEMESTER - II

### 2.1 P201: Introductory Physics-II (For all streams)

#### UNIT - I

The Electric Field: Review of key ideas, Digression on nuclear forces, The electric field  $E$ , Visualizing the field, Field of a dipole, Far field of dipole: general case, Response to a field, Dipole in a uniform field, Gauss's Law: Field of an infinite line charge, Field of an infinite sheet of charge, Spherical charge distribution: Gauss's law, Digression on the area vector  $dA$ , Composition of areas, An application of the area vector, Gauss's law through pictures, Continuous charge density

#### UNIT - II

Application of Gauss's Law: Applications of Gauss's law, Field inside a shell, Field of an infinite charged wire, Field of an infinite plane, Conductors, Field inside a perfect conductor, The net charge on a conductor, A conductor with a hole inside, Field on the surface of a conductor

#### UNIT - III

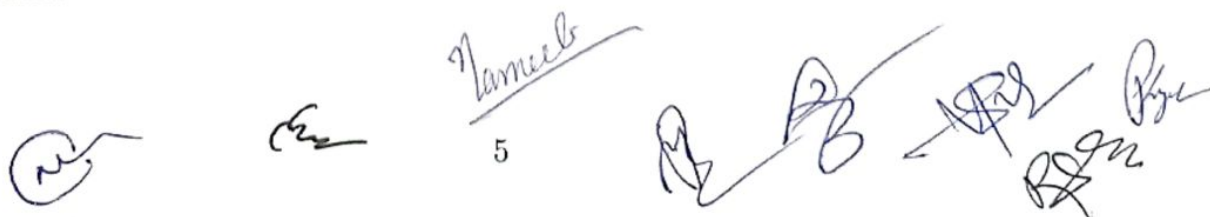

Magnetism: Experiments pointing to magnetism, Examples of the Lorentz force, the cyclotron, Lorentz force on current-carrying wires, The magnetic dipole, The DC motor, Biot-Savart Law, field of a loop, Microscopic description of a bar magnet, Magnetic field of an infinite wire, Ampere's law, Maxwell's equations (static case)

#### UNIT - IV

Wave Theory of Light: Interference of waves, Adding waves using real numbers, Adding waves with complex numbers, Analysis of interference, Diffraction grating, Single-slit diffraction, Understanding reflection and crystal diffraction, Light incident on an oil slick, Normal incidence, Oblique incidence

#### UNIT - V

Optics: The Principle of Least Time Light, Reflection and refraction, Fermat's principle of least time, Applications of Fermat's principle, Geometrical Optics: The focal length of a spherical surface, The focal length of a lens, Magnification, Compound lenses, Aberrations, Resolving power, Color Vision: The human eye, dependence of Color intensity, Measuring the color sensation, The chromaticity diagram, The mechanism of color vision, Physiochemistry of color vision, Mechanisms of Seeing: The sensation of color, The physiology of the eye, The rod cells, The compound (insect) eye, Other eyes, Neurology of vision

Handwritten signatures and marks at the bottom of the page, including a signature that appears to be 'Samuel' and the number '5'.

## 2.2 PL201: Physics Laboratory – II

Review of uncertainty / error analysis; least squares fit method; introduction to sensors / transducers; determination of 'g' (acceleration due to gravity) by free fall method; study of physical pendulum using a PC interfaced apparatus – study variation of effective 'g ' with change of angle of plane of oscillation - investigation of effect of large angle of oscillation on the motion; study of Newton's laws of motion using a PC interfaced apparatus; study of conservation of linear and angular momentum using Maxwell's needle' apparatus; study of vibrations of soft massive spring; study of torsional oscillatory system; study of refraction in a prism - double refraction in calcite and quartz; study of equipotential surface using different electrode shapes in a minimal conducting liquid medium; determination of electrical inductance by vector method and study effect of ferromagnetic core and study the effect of non-linearity of inductance with current.

## Suggested Texts and References:

1. Advanced Practical Physics for Students, B. L. Worsnop and H. T. Flint, Methuen and Co. Ltd., London

Handwritten signatures and initials at the bottom of the page, including 'Zameek', 'R', 'B', 'R', 'R', and 'R'.

## 2.3 G201- Electronics & Instrumentation

### UNIT - I

The Circuit Abstraction: The Power of Abstraction, The Lumped Circuit Abstraction, The Lumped Matter Discipline, Limitations of the Lumped Circuit Abstraction, Practical Two-Terminal Elements, Batteries, Linear Resistors, Associated Variables Convention, Ideal Two-Terminal Elements, Ideal Voltage Sources, Wires, and Resistors, Element Laws, The Current Source, Another Ideal Two-Terminal Element, Modeling Physical Elements, Signal Representation, Analog Signals, Digital Signals, Value Discretization

### UNIT - II

Resistive Networks: Terminology, Kirchhoff's Laws, KCL, KVL, Circuit Analysis: Basic Method, Single-Resistor Circuits, Quick Intuitive Analysis of Single-Resistor Circuits, Energy Conservation, Voltage and Current Dividers, Intuitive Method of Circuit Analysis: Series and Parallel Simplification, Circuit Examples, Dependent Sources and the Control Concept Circuits with Dependent Sources, A Formulation Suitable for a Computer Solution

Network Theorems: The Node Voltage, The Node Method, Floating Independent Voltage Sources, Dependent Sources and the Node Method, The Conductance and Source Matrices, Loop Method, Superposition, Superposition Rules for Dependent Sources, Thevenin's Theorem and Norton's Theorem, The Thevenin Equivalent Network, The Norton Equivalent Network,

### UNIT - III

Number Systems and Codes: Decimal Odometer, Binary Odometer, Number codes, Binary-to-Decimal conversion, Decimal-to-Binary conversion, Hexadecimal Numbers, Hexadecimal-to-Binary conversion, Binary-to-Hexadecimal conversion, Decimal-to-Hexadecimal conversion, BCD Numbers, ASCII code  
Digital electronics: Review of basic logic gates; DeMorgan's theorem, Use of NAND / NOR as universal building blocks; arithmetic circuits; binary addition, half adder, full adder, binary subtraction - 1s and 2s complement, controlled inverter, adder / subtracter, parity checker

### UNIT - IV

Introduction to measurements: Measurement units, Measurement system applications, Elements of a measurement system, Choosing appropriate measuring instruments

Instrument types and Performance Characteristics: Review of instrument types, Active and passive instruments, Null-type and deflection-type instruments, Analogue and digital instruments, Indicating instruments and instruments with a signal output, Smart and non-smart instruments

Static characteristics of instruments: Accuracy and inaccuracy (measurement uncertainty), Precision/ repeatability/ reproducibility, Tolerance, Range or span, Linearity, Sensitivity of measurement, Threshold, Resolution, Sensitivity to disturbance, Hysteresis effects, Dead space

Dynamic characteristics of instruments: Zero order instrument, First order instrument, Second order instrument, Necessity for calibration

### UNIT - V

Errors during the Measurement Process: Sources of systematic error, System disturbance due to measurement, Errors due to environmental inputs, Wear in instrument components, Connecting leads, Reduction of systematic errors, Careful instrument design, Method of opposing inputs, High-gain

Handwritten signatures and initials at the bottom of the page, including a circled 'M', 'Lancelotti', and other illegible marks.

feedback, Calibration, Manual correction of output reading, Intelligent instruments, Quantification of systematic errors, Random errors, Statistical analysis of measurements subject to random errors, Graphical data analysis techniques – frequency distributions, Aggregation of measurement system errors, Combined effect of systematic and random errors, Aggregation of errors from separate measurement system components, Total error when combining multiple measurements  
 Calibration of Measuring Sensors and Instruments: Principles of calibration, Control of calibration environment, Calibration chain and traceability, Calibration records

14. "Electrical Measurements & Electronic Measurements" by A.K. Sawhney

## 2.4 GL201 Electronics laboratory

1. To study the Half wave & Full wave rectifier and study the effect of C filter.
2. To design a Single Stage CE amplifier for a specific gain and bandwidth.
3. Study of Operational amplifier in inverting and non-inverting mode.
4. To verify and design AND, OR, NOT and XOR gates using NAND gates.
5. To study FLIP-FLOP circuits
6. To Study power regulator circuits

## SEMESTER - III

### 3.1 P301: Mathematical Physics – I

#### UNIT - I

Review of first order differential equations, the notion of Wronskian and its properties, Series solutions of second order differential equations, Frobenius method. Rodrigues formula and classical orthogonal polynomials, recurrence relations, symmetry properties, special values, orthogonality, normalisation.

#### UNIT - II

Generating functions. Legendre, Hermite, Laguerre, Bessel and Hypergeometric differential equations. Integral representations of special functions. Expansion of functions in orthonormal basis.

#### UNIT - III

Complex variables: Notion of analyticity, Cauchy – Riemann conditions, Harmonic functions; Contour integrals, Cauchy theorem, simply and multiply connected domains, Cauchy integral formula, derivatives of analytic functions.

#### UNIT - IV

Laurent series, uniform convergence; Notion of residues, residue theorem, notion of principal values, applications of residues to evaluation of improper integrals, definite integrals, indentation, branch points and branch cuts.

#### UNIT - V

Fourier series and simple applications. Fourier transforms, Parseval's theorem, convolution, and their simple applications. Laplace transforms, initial value problems, simple applications, transients in circuits, convolution.

#### Suggested Texts and References:

1. Complex Variables and Applications, R. V. Churchill and J. W. Brown, McGraw-Hill, 2009
2. Complex Variables: Introduction and Applications, 2nd Edition, M. J. Ablowitz and A. S. Fokas, Cambridge 2003
3. Differential Equations, G. F. Simmons, McGraw-Hill, 2006
4. Ordinary Differential Equations, V. I. Arnold, MIT Press 2009

5. Mathematical Methods for Physicists, 7th Edition, G. Arfken and Hans J. Weber, Elsevier 2012.

## 3.2 P302: Classical Mechanics – I

### UNIT - I

Recap- Newton's laws, vector algebra, gradient; momentum, energy, constraints, conservative forces, potential energy, angular momentum. Inertial and non – inertial frames, fictitious forces.

### UNIT - II

Foucault pendulum, effects of Coriolis force. Central forces, conservation of energy and angular momentum, trajectories, orbits,  $1/r$  potential (quadrature), classical scattering, two body problem, centre of mass and relative motions.

### UNIT - III

Rigid body motion, moment of inertia tensor, energy and angular momentum, Euler's theorem, motion of tops, gyroscope, motion of the Earth. Introduction to Lagrangian through variational principle, applications of variational principle.

### UNIT - IV

Relativity: Historical background, inconsistency of electrodynamics with Galilean relativity. Einstein's hypothesis and Lorentz transformation formula, length contraction, time dilation.

### UNIT - V

Doppler shift. Energy, momentum and mass, mass – energy equivalence. Four vector notation, consistency of electrodynamics with relativity.

### Suggested Texts and References:

1. An Introduction to Mechanics, 1st Edition, D. Kleppner and R. J. Kolenkow, Tata McGraw – Hill Education, 2007
2. Classical Mechanics, 5th Edition, T. W. B. Kibble, F. Berkshire, World Scientific 2004.
3. Introduction to Special Relativity, R. Resnik, Wiley (India), 2012
4. Spacetime Physics, 2nd Edition, E. F. Taylor, J. A. Wheeler, W. H. Freeman and Co. 1992.
5. Classical mechanics, N. C. Rana, P. S. Joag, Tata McGraw-Hill Education, 2001.

## 3.3 P303: Electromagnetism

### UNIT - I

Electrostatics: Coulomb's law, Electric field, Gauss' law in differential and integral forms, Scalar potential, Poisson and Laplace equations, Discontinuities in Electric field and potential: electrostatic boundary conditions, Uniqueness theorem, conductors and second uniqueness theorem, method of images, multipole expansion, work and energy in electrostatics. 12

## UNIT - II

Electric Fields in matter: dielectrics, polarisation, bound charges, notion of electric displacement, Gauss' law in presence of dielectrics, boundary conditions, linear dielectrics: susceptibility, permittivity, dielectric constant, boundary value problems, energy in dielectric systems.

## UNIT - III

Magneto statics: Lorentz force law, steady currents, Biot – Savart law, Ampere's law, vector potential, magneto static boundary conditions, multipole expansion for vector potential, magnetic scalar potential. Diamagnets, paramagnets and ferromagnets, magnetisation, bound currents, the H field, boundary conditions, magnetic susceptibility and permeability.

## UNIT - IV

Electrodynamics: Electromotive force, electromagnetic induction and Faraday's law, induced electric fields and inductance, energy in magnetic fields. Maxwell's equations: equation of continuity and Modification in Ampere's law, Gauge transformations, Lorentz and Coulomb gauge. Maxwell's equations in matter, integral and differential forms, boundary conditions.

## UNIT - V

Poynting's theorem, conservation of momentum, angular momentum. Lossy media, Poynting's theorem for lossy media. Wave equation, electromagnetic waves in vacuum, plane waves, propagation in lossless and lossy linear media, absorption and dispersion, reflection at the interface of two lossy media, guided waves.

### Suggested Texts and References:

1. Introduction to Electrodynamics, 4th Edition, D. J. Griffiths, Addison-Wesley 2012
2. Classical Electricity and Magnetism, 2nd Edition, W.K.H. Panofsky and M. Phillips, Dover 2005.
3. Engineering Electromagnetics, 2nd Edition, Nathan Eda, Springer 2007

## 3.4 P304: Waves and Oscillations

### UNIT - I

Free oscillations, Simple harmonic motion, damped and forced oscillations; Coupled oscillators, normal modes, beats, infinite coupled oscillators and dispersion relation of sound; vibrating string; travelling and stationary waves; Amplitude, phase and energy. Derivation of wave equation for a string; Longitudinal and transverse waves.

### UNIT - II

Waves in two and three dimensions, the wave vector, wave equation, linearity, superposition, Fourier decomposition of a wave, notion of wave packets, phase and group velocity. Example of mechanical waves (sound waves), speed of sound in air, effect of bubbles, natural observations and qualitative explanations.

**UNIT - III**

String and wind instruments. Chaldni plates. Propagation in changing media, continuity conditions, characteristic impedance. Snell's laws and translation invariant boundary, prism, total internal reflection, evanescent waves. Water waves, ocean waves, Tsunami.

**UNIT - IV**

Electromagnetic waves, polarisation, interference.

**UNIT - V**

Fraunhofer diffraction. Shocks waves, boat wakes, linear analysis of the Kelvin wake. Alfvén waves (qualitative).

**Suggested Texts and References:**

1. Waves, Berkeley Physics Course Vol. 3, Frank S. Crawford, Tata McGraw – Hill Education, 2011
2. Introduction to the Physics of Waves, Tim Freearge, Cambridge Univ. Press 2012
3. The Physics of Waves, Howard Georgi (<http://www.people.fas.harvard.edu/~hgeorgi/new.htm>)

**3.5 H302 : History and Philosophy of Science (All streams)****UNIT - I**

History of World Science up to the Scientific Revolution: Introduction about Stone Age, beginning of agriculture, urban civilization and science. Science in Sumeria, Babylonia and Egypt. Natural philosophy of pre-Socratic Greece. Natural philosophy in Athens. Greek science in the Alexandrian period. Rome and decline of Ancient European science. Science and technology in China. Science and technology in the Muslim world. Technology and the craft tradition in medieval Europe. The scholarly tradition during the middle ages

**UNIT - II**

Renaissance, the Copernican system of the world. Gilbert, Bacon and the experimental method. Galileo and the science of mechanics. Descartes – the mathematical method and the mechanical philosophy. The Protestant reformation and the scientific revolution. Newton – the theory of universal gravitation and optics. Alchemy and iatrochemistry. Medicine, theory of circulation of blood. Growth and characteristics of the scientific revolution.

**UNIT - III**

History of Ancient Indian Science: Indian civilization from pre-historic times to the Indus Valley Civilization. Ancient Indian mathematics and astronomy. Ancient Indian medicine and biology. Chemistry, metallurgy and technology in general in ancient India. Strengths, weaknesses and potentialities of ancient Indian science.

## UNIT - IV

Introduction to Philosophy of Science: What is science? Scientific reasoning; Explanation in science; Realism and instrumentalism; Scientific change and scientific revolutions.

## UNIT - V

Great Scientific Experiments: Group wise study and presentations by students of historically significant experiments in science.

## 3.6 PL301: Physics Laboratory – III

Frequency response of R-C circuit (concept of cut-off freq and filter) and frequency response of LC circuit; concepts of phase difference between voltage and current in these circuits, phase factor for appliances using AC mains supply; R-L-C (series / parallel) resonance; transient response in RL-C series circuit; study of Newton's rings and interference in wedge shaped films; study of double refraction in calcite / quartz prisms, polarisation of the refracted light rays, optical activity in dextrose and fructose; soldering experience – make a gated timer with indicator; measurement of heat capacity of air; Use of thermocouple / platinum resistance thermometer, use of instrumentation amplifier in amplifying signal from thermocouple; study of the laws of a gyroscope; determination of the charge of an electron by Millikan's oil drop experiment.

### Suggested Texts and References:

1. Advanced Practical Physics for Students, B. L. Worsnop and H. T. Flint, Methuen and Co. Ltd., London.

### 3.7 GL301: Applied Electronics Laboratory

The course is based on the micro-controller system expEYES and 'Microhope' based on ATmega32 micro controller, developed at IUAC, under a UGC programme. Use of expEYES kit for monitoring pendulum motion, charge and discharge of capacitor etc to appreciate the goal of the course; Revision of concepts of binary numbers: 'Bit', 'Byte', 'Word', hexa-decimal numbers; Concepts of microprocessor and micro controllers - CPU, registers, memory (RAM, ROM, different kinds of ROM), data and address bus, decoder, encoder, instruction set, etc. Review of concepts of Digital to Analogue Conversion (DAC) and Analogue to Digital Conversion (ADC), Introduction to micro-controller ATmega32 (which is used in expEYES). Concepts of programming, flow chart, assembly language, and simulator. Concept of I/O programming for ATmega32 Examples of simple I/O program in assembly language, assemble it in an assembler in a PC and download the hex code into micro controller kit 'microhope' through USB port and verify the operation. C language for writing larger programmes, such as monitoring temperature, which uses ADC of ATmega32. Concept of interrupt and its use in real time data acquisition. Introduction to elements of PYTHON language. Concepts of how expEYES system program resident in ATmega32 is interfaced to commands from PC in Python language; Automated measurement of simple experiments under expEYES, such as, applications such as temperature monitor, pH meter, calorimeter, protein measurement experiments, etc., will be done. As a part of these applications, introduction will be given to sensors, such as temperature sensors, pressure sensors, humidity, pH sensors, photodetectors etc, The experiments will also include I/O programme for keypad inputs and LCD display.

## SEMESTER - IV

### 4.1 P401: Mathematical Physics – II

#### UNIT - I

Review of curvilinear coordinates, scale factors, Jacobian. Partial differential equations in curvilinear coordinates, classification. Laplace equation, separation of variables, boundary conditions and initial conditions, examples.

#### UNIT - II

Inhomogeneous equations, Green's functions in 1, 2 and 3 dimensions.

#### UNIT - III

Tensors calculus: contravariant and covariant notation, Levi-Civita symbol, pseudotensors, quotient rule, dual tensors.

#### UNIT - IV

Integral equations: Fredholm and Volterra equations, separable kernel, applications. Elementary group theory and group representations, cyclic, permutation groups; isomorphism, homomorphism.

#### UNIT - V

subgroups, normal subgroup, classes and cosets; orthogonal, rotation group, Lie group; equivalent, reducible, irreducible; Schur's lemma.

#### Suggested Texts and References:

7. Elements of Green's Functions and Propagation, G. Barton, Oxford 1989.

## 4.2 P402: Quantum Mechanics – I

### UNIT - I

Quantum Mechanics: The Main Experiment, Double-slit experiment with light, Trouble with Maxwell, Digression on photons, Photoelectric effect, Compton effect, Matter waves, Photons versus electrons, The Heisenberg uncertainty principle, states of position and momentum in QM, Heisenberg microscope, The wave function  $\Psi$ , Collapse of the wave function

### UNIT - II

The Wave Function and Its Interpretation, Probability in classical and quantum mechanics, Statistical concepts: mean and uncertainty, Quantization and Measurement, More on momentum states, Single-valuedness and quantization of momentum, Quantization, The integral of  $\Psi_p(x)$ , Measurement postulate: momentum An example solvable by inspection, Using a normalized  $\Psi$ , Finding  $A(p)$  by computation, Fourier's theorems

### UNIT - III

Measurement postulate: general, More than one variable, States of Definite Energy, Free particle on a ring, Analysis of energy levels: degeneracy, Particle in a well, The box: an exact solution, Energy measurement in the box

### UNIT - IV

Scattering and Dynamics, Quantum scattering (1-D), Scattering for  $E > V_0$  Scattering for  $E < V_0$ , Tunneling, Quantum dynamics, A solution of the time dependent Schrödinger equation, Derivation of the particular solution  $\Psi_E(x, t)$ , Special properties of the product solution, General solution for time evolution, Time evolution: a more complicated example

### UNIT - V

Discussion on postulates of quantum mechanics, Eigenvalue problem, The Dirac delta function and the operator  $X$ , Postulates: final. Many particles, bosons, and fermions, Identical versus indistinguishable, Implications for atomic structure, Energy-time, uncertainty principle  
Time-Independent Schrödinger Equation: Stationary States, The Infinite Square Well, The Harmonic Oscillator, Algebraic Method, Analytic Method, The Free Particle, The Delta-Function Potential, Bound States and Scattering States, The Delta-Function Well, The Finite Square Well

## 4.3 PCB 401: Physical and Chemical Kinetics

### UNIT - I

Basic Concepts: Rate, order and molecularity of a reaction, Specific rate and specific rate constant, First, second and third order reactions – effect of concentration on reaction rate, rate expressions and integrated form, pseudo-unimolecular, nth order reaction of a single component.

### UNIT - II

Kinetic Measurements: Experimental determination of reaction rates and order of reactions, Integrated rate method, Vant Haff differential rate method, Graphical method, Half life method, Ostwald dilution law method, initial rate as a function of initial concentrations. Order of complex reaction, Steady State approximation method, Equilibrium method, relaxation methods for fast reaction

### UNIT - III

Factors Affecting Reaction Rate: Effect of temperature on reaction rate – Arrhenius equation and activation energy, temperature coefficient theory, overall rate constant, overall activation energy, overall pre-exponential factor, effect of ionic strength on reactions between ions, kinetic salt effect, effect of solvent on ionic reaction, dielectric constant, linear free energy relationship

### UNIT - IV

Complex Reactions: Kinetics of parallel first order reaction, Wegscheider Test, kinetics of reversible reaction/opposing reaction, kinetics of consecutive reaction, kinetics of photochemical reaction, radioactive decay, complex mechanisms involving equilibria.

### UNIT - V

Catalysis: Homogeneous catalysis, basis of catalytic action, catalysis and the equilibrium constant, Michaelis-Menten kinetics, acid base catalysis, the Bronsted catalysis law, negative catalysis and inhibition, heterogeneous catalysis, surface reactions – effect of temperature and nature of surface

### Suggested Texts and References:

1. K.A. Connors, Chemical Kinetics : A Study of Reaction Rates in Solution, V.C.H. Publications 1990.

7. Puri, Sharma, Pathania, Principles of Physical Chemistry

## 4.4 G401: Statistical Techniques and Applications

### UNIT - I

Purpose of Statistics, Events and Probabilities, Assignments of probabilities to events, Random events and variables, Probability Axioms and Theorems. Probability distributions and properties: Discrete, Continuous and Empirical distributions. Expected values: Mean, Variance, Skewness, Kurtosis, Moments and Characteristics Functions.

### UNIT - II

Types of probability distributions: Binomial, Poisson, Normal, Gamma, Exponential, Chi-squared, Log-Normal, Student's t, F distributions, Central Limit Theorem.

### UNIT - III

Monte Carlo techniques: Methods of generating statistical distributions: Pseudorandom numbers from computers and from probability distributions, Applications. Parameter inference: Given prior discrete hypotheses and continuous parameters, Maximum likelihood method for parameter inference. Error Analysis: Statistical and Systematic Errors, Reporting and using uncertainties. Propagation of errors, Statistical analysis of random uncertainties, Averaging Correlated/ Uncorrelated Measurements.

### UNIT - IV

Deconvolution methods, Deconvolution of histograms, binning-free methods. Least-squares fitting: Linear, Polynomial, arbitrary functions: with descriptions of specific methods; Fitting composite curves. Hypothesis tests: Single and composite hypothesis, Goodness of fit tests.

### UNIT - V

P-values, Chi-squared test, Likelihood Ratio, Kolmogorov- Smirnov test, Confidence Interval. Covariance and Correlation, Analysis of Variance and Covariance. Illustration of statistical techniques through hands-on use of computer programs.

### Suggested Texts and References:

1. Statistics: A Guide to the Use of Statistical Methods in the Physical Sciences, R.J. Barlow, John Wiley 1989.
2. The Statistical Analysis of Experimental Data, John Mandel, Dover Publications 1984.
3. Data Reduction and Error Analysis for the Physical Sciences, 3rd Edition, Philip Bevington and Keith Robinson, McGraw Hill 2003.

## 4.5 PL401: Physics Laboratory – IV

Application of PHOENIX (IUAC, New Delhi) microcontroller system for automation in 20 experiments (six sessions); study of acoustic resonance in Helmholtz resonator using PHOENIX system; Resolving power of optical grating; study of atomic spectra in hydrogen, helium, mercury; Application of gamma counts from detected by G.M. counter for study of Poisson and Gaussian distributions;

*(Handwritten signatures and initials)*

study of black body radiation by optical and thermal radiations; study of electrically coupled oscillators – normal and transient response. Assembling components for an experiment on thermal and electrical conductivity of metals and making of measurements.

### Suggested Texts and References:

1. Phoenix: Computer Interfaced Science Experiments – <http://www.iuac.res.in/elab/phoenix/>
2. The Art of Experimental Physics, D. W. Preston and D. R. Dietz, Wiley 1991.
3. Manual of Experimental Physics with Indian Academy of Sciences, Bangalore kit, R. Srinivasan and K.R.S. Priolkar.

## 4.6 GL401: Computational Laboratory and Numerical Methods

1. GNU Plot, FORTRAN90, Pointers and Object Oriented Programming
2. The nature of computational physics: Machine representation, precision and errors in computation. Errors and uncertainties. E.g. One should understand how to analyze whether a calculation is limited by the algorithm or round-off error. Single/double precision.
3. Basic tools for numerical analysis in science: Solution of algebraic functions – Fixed point method, Newton-Raphson method, Secant method. Numerical Integration – Rectangular method, trapezoidal method. Lagrange's interpolation.
4. Matrix Algebra: Approximate solution of a set of linear simultaneous equations by GaussSidel iteration method. Exact solution by Gaussian elimination. Inversion of a matrix by Gaussian elimination. Determining all the eigenvalues of a real symmetric matrix by Householder's method of tridiagonalization followed by QR factorization of the tridiagonalized matrix.
5. Differential Equations (ODE and PDE): Solution of an ODE by Euler's method and RungeKutta (4) method – comparison of convergence Solution of partial differential equation (Laplace's equation and Poisson's equation) – Boundary Value Problem – solved using Gauss-Sidel iteration followed by plotting using GNUPlot .
6. Nonlinear Systems, dynamics: Fractals – generating the Mandelbrot set and Julia sets. Definition of each. Solution of nonlinear set of ODEs – Lorenz equations – Observation and definition of strange attractor and sensitive dependence upon initial conditions (butterfly effect). Study of the logistic map – non linear dynamical system – obtaining a bifurcation diagram and estimating Feigenbaum's constant.
7. Fourier analysis of nonlinear systems: Getting used to programming using FFT subroutines. Understanding the relationship between time-domain and frequency domain. Transforming a Gaussian, understanding how temporal FWHM and spectral FWHM are related. Solving a nonlinear PDE which is amenable to solution by multiple steps of FFTs.

A collection of handwritten signatures and initials in blue ink, including a large 'M', the name 'Zameeb', and other illegible scribbles.

## SEMESTER - V

### 5.1 P501: Quantum Mechanics – II

#### UNIT - I

Formalism of quantum mechanics: Hilbert Space, Observables, Hermitian Operators, Determinate States, Eigenfunctions of a Hermitian Operator, Discrete Spectra, Continuous Spectra, Generalized Statistical Interpretation, The Uncertainty Principle, Proof of the Generalized Uncertainty Principle, The Minimum-Uncertainty Wave Packet, The Energy-Time Uncertainty Principle, Vectors and Operators, Bases in Hilbert Space, Dirac Notation, Changing Bases in Dirac Notation

Quantum Mechanics in Three Dimensions: The Schrödinger Equation, Spherical Coordinates, The Angular Equation, The Radial Equation, The Hydrogen Atom, The Radial Wave Function, The Spectrum of Hydrogen, Angular Momentum, Eigenvalues, Eigenfunctions, Spin, Spin 1/2, Electron in a Magnetic Field, Addition of Angular Momenta, Electromagnetic Interactions, Minimal Coupling, The Aharonov-Bohm Effect

#### UNIT - II

Identical Particles: Two-Particle Systems, Bosons and Fermions, Exchange Forces, Spin, Generalized Symmetrization Principle, Atoms, Helium, The Periodic Table, Solids, The Free Electron Gas, Band Structure

#### UNIT - III

Time-Independent Perturbation Theory: Nondegenerate Perturbation Theory, General Formulation, First-Order Theory, Second-Order Energies, Degenerate Perturbation Theory, Two-Fold Degeneracy, "Good" States, Higher-Order Degeneracy, The Fine Structure of Hydrogen, The Relativistic Correction, Spin-Orbit Coupling, The Zeeman Effect, Weak-Field Zeeman Effect, Strong-Field Zeeman Effect, Intermediate-Field Zeeman Effect, Hyperfine Splitting in Hydrogen.

#### UNIT - IV

The Variational Principle: Theory, The Ground State of Helium, The Hydrogen Molecule Ion, The Hydrogen Molecule

The WKB Approximation, The "Classical" Region, Tunneling, The Connection Formulas

#### UNIT - V

Scattering: Classical Scattering Theory, Quantum Scattering Theory, Partial Wave Analysis, Formalism, Strategy, Phase Shifts, The Born Approximation, Integral Form of the Schrödinger Equation,

The First Born Approximation, The Born Series

5. Quantum Mechanics: Theory and Applications, A. Ghatak, S. Loknathan.
6. Quantum Mechanics Concepts and Applications, Nouredine Zettili, second edition

## 5.2 P502: Classical mechanics – II

### UNIT - I

Variational principle (revisited), Lagrangian formulation, constraints, generalised coordinates, applications. Hamilton's equations of motion (from Legendre transformation), Hamiltonian and total energy, cyclic coordinates, variational principle.

### UNIT - II

Small oscillations, single oscillator, damped and forced oscillations, coupled oscillators, normal modes.

### UNIT - III

Canonical transformations, Poisson brackets, conservation theorems.

### UNIT - IV

Hamilton – Jacobi theory, action – angle variables. Canonical perturbation theory, time dependent and time independent.

### UNIT - V

Lagrangian formulation of continuous media as a limiting case, extensions.

### Suggested Texts and References:

1. Classical mechanics, N. C. Rana, P. S. Joag, Tata McGraw-Hill Education, 2001.
2. Mechanics, L. D. Landau, E. M. Lifshitz, Elsevier 2005.
3. Regular and Chaotic Dynamics, 2nd Edition, A. J. Lichtenberg, M. A. Leiberman, Springer 1992.
4. Classical mechanics, 3rd Edition, H. Goldstein, C. P. Poole, J. Safko, Pearson Education 2011.

## 5.3 P503: Atomic and Molecular Physics

### UNIT - I

Many – electron atoms: One – electron wavefunctions and energies in Coulomb potential (revision); Atomic orbitals, spin – orbit coupling, Thomas precession, fine structure; Alkali atoms; Helium ground state and excited states, direct and exchange integrals; Many – electron atoms: LS and jj coupling schemes; Hartree – Fock method; Pauli's principle and the Periodic Table; Nuclear spin and hyperfine structure.

### UNIT - II

Atoms in External Fields: Quantum theory of normal and anomalous Zeeman effect, Linear and quadratic Stark effect; Semi – classical theory of radiation; Absorption and induced emission; Einstein's A and B coefficients, dipole approximation, intensity of radiation, selection rules.

### UNIT - III

Two level atom in a coherent radiation field, Rabi frequency, radiative damping, optical Bloch equation, Broadening of spectral lines (Doppler, pressure and power broadening).

### UNIT - IV

Lasers: Basic concepts, rate equation and lasing conditions, working of some common lasers. Doppler free laser spectroscopy; Crossed – beam method, saturated absorption spectroscopy, two photon spectroscopy; Laser cooling and trapping (descriptive); Atom interferometry (descriptive).

### UNIT - V

Molecules: Ionic and covalent bonding, Hydrogen molecular ion ( $H_2^+$ ), Born – Oppenheimer approximation; Bonding and anti – bonding orbitals, Hydrogen molecule; Heitler – London method, Molecular orbital method, hybridisation, quantum mechanical treatment of rotational and vibrational spectra (diatomic and polyatomic molecules); Electronic spectra, Raman effect (classical and quantum theory); Vibrational and rotational Raman spectra; Electron spin resonance.

### Suggested Texts and References:

1. Atomic Physics, Christopher Foot, Oxford University Press, 2005.
2. Intermediate Quantum Mechanics, 3rd Edition, H. A. Bethe and R. W. Jackiew, Persius 1997
3. The Physics of Atoms and Quanta: Introduction to Experiments and Theory, H. Haken, H. C. Wolf and W. D. Brewer, Springer 2005
4. Molecular Physics and Elements of Quantum Chemistry: Introduction to Experiments and Theory, H. Haken, H. C. Wolf and W. D. Brewer, Springer 2010.

Handwritten notes and signatures, including the name "Namech" and other illegible signatures.

## 5.4 PM501: Numerical Analysis

### UNIT - I

Error, its sources, propagation and analysis; Errors in summation, stability in numerical analysis. Linear algebraic equations: Gaussian elimination, direct triangular decomposition, matrix inversion.

### UNIT - II

Root finding: review of bisection method, Newton's method and secant method; real roots of polynomials, Laguerre's method. Matrix eigenvalue problems: Power method, eigenvalues of real symmetric matrices using Jacobi method, applications.

### UNIT - III

Interpolation theory: Polynomial interpolation, Newton's divided differences, forward differences, interpolation errors, cubic splines. Approximation of functions: Taylor's theorem, remainder term; Least squares approximation problem, Orthogonal polynomials.

### UNIT - IV

Numerical integration: review of trapezoidal and Simpson's rules, Gaussian quadrature; Error estimation. Numerical differentiation. Monte Carlo methods.

### UNIT - V

Least squares problems: Linear least squares, examples; Non - linear least squares. Ordinary differential equations: stability, predictor - corrector method, Runge - Kutta methods, boundary value problems, basis expansion methods, applications. Eigenvalue problems for differential equations, applications. Solutions of PDE's using differential quadrature: elementary treatment. Applications to diffusion equation, wave equation, etc.

2. Numerical Methods for Scientists and Engineers, H. M. Antia, Hindustan Book Agency 2012.
3. Numerical Recipes in Fortran, 2nd Edition, W. H. Press et al., Cambridge University Press 2000.

## 5.5 PL501: Physics Laboratory - V

Study of diffraction by single slit, double slit and multiple slits leading to grating, quantitative determination and compare with simulation; Study of Michelson interferometer and determination of refractive index of air; study of Fabry-Perot interferometer; Study of Zeeman effect using Fabry-Perot Interferometer; study of characteristics of scintillation counter used in nuclear radiation detection; study of Hall effect in semiconductors; Introduction to Labview software for automation and use of NI data acquisition card in PC (six sessions).

### Suggested Texts and References:

1. The Art of Experimental Physics, D. W. Preston and D. R. Dietz, Wiley 1991

## 5.6 PML501: Numerical Methods Laboratory

The methods developed in Numerical Analysis (P501) are to be implemented on a computer. Emphasis to be given on applications to physical problems.

### Suggested Texts and References:

1. Numerical Recipes in Fortran, 2nd Edition, W. H. Press et al., Cambridge University Press 2000
2. An Introduction to Computational Physics, 2nd Edition, Tao Pang, Cambridge University Press 2010

## SEMESTER - VI

### 6.1 P601: Electrodynamics

#### UNIT - I

Review of Maxwell's equations, vector and scalar potentials, gauge transformations. Radiating systems: electric dipole fields and radiation, magnetic dipole and electric quadrupole fields, antenna, spherical wave solutions of the scalar wave equation.

#### UNIT - II

Multipole expansion of the electromagnetic fields, energy and angular momenta of multipole radiation, angular distribution of multipole radiation, multipole moments, multipole radiation in atoms and nuclei, multipole radiation from linear centre fed antenna.

#### UNIT - III

Scattering and Diffraction problems: scattering at long wavelength, perturbation theory of scattering, explanation of blue sky (due to Rayleigh), scalar diffraction theory.

#### UNIT - IV

Covariant formulation of electrodynamics: four vector potential, electromagnetic field tensor, covariant description of sources in material media, field equations in a material medium. Retarded potentials, Jefimenko's generalisations of Coulomb and Biot – Savart laws, Lienard – Wiechert potentials.

#### UNIT - V

Fields of a moving charge. Cerenkov radiation. Covariant formulation of the conservation laws of electrodynamics.

#### Suggested Texts and References:

1. Introduction to Electrodynamics, 4th Edition, D. J. Griffiths, Addison-Wesley 2012
2. Classical Electricity and Magnetism, 2nd Edition, W.K.H. Panofsky and M. Phillips, Dover 2005
3. Classical Electrodynamics, 3rd Edition, J. D. Jackson, Wiley 2012
4. Lectures on Electromagnetism, 2nd Edition, Ashok Das, Hindustan Book Agency 2013.

## 6.2 P602: Statistical Mechanics - I

### UNIT - I

Elementary probability theory; random walk; binomial, Poisson, log normal distributions; the Gaussian. Kinetic theory of gases.

### UNIT - II

Ensembles; micro-canonical ensemble; canonical ensemble; grand canonical ensemble. Partition functions and their properties; calculation of thermodynamic quantities; Gibbs paradox; the equipartition theorem.

### UNIT - III

Two level system and paramagnetism. Validity of the classical approximation; identical particles and symmetry; quantum distribution functions; Bose-Einstein statistics; Fermi-Dirac statistics;

### UNIT - IV

Quantum Statistics in the classical limit; physical implications of the quantum-mechanical enumeration of states; conduction electrons in metals.

### UNIT - V

Special topics: the Chandrasekhar Limit; Saha Ionization formula. Systems of interacting particles; Debye approximation; van der Waals equation; Weiss molecular-field approximation.

### Suggested Texts and References:

1. Thermodynamics and an Introduction to Thermostatistics, 2nd Edition, H. B. Callen, Wiley 2006
2. Fundamentals of Statistical and Thermal Physics, F. Reif, McGraw-Hill Book Company
3. Statistical Physics part 1, 3rd Edition, L. D. Landau and E. M. Lifshitz, Elsevier 2008
4. Statistical Mechanics: A Set of Lectures, R. P. Feynman, W. A. Benjamin, Inc. 1998
5. A Modern Course in Statistical Physics, L. E. Reichl, Wiley 2009

## 6.3 P602 Computational Physics - A (only for SEMESTER-IV students of session 2021-22)

### UNIT - I

Introduction of Fortran programming Language, Random Number generation and testing, Generation of random numbers with given distribution

Handwritten signatures and initials at the bottom of the page, including a signature that appears to be 'Ramesh' and several other scribbled marks.

## UNIT - II

Numerical Integration: (a) Deterministic: Trapezoidal method and (b) Multi-dimensional Integration using stochastic methods.

## UNIT - III

Lattice Monte Carlo simulations using Ising model to understand phase transitions: Metropolis algorithm, understanding kinetic barriers, finite size effects, role of thermal fluctuations, Metropolis algorithm, understanding kinetic barriers, finite size effects, role of thermal fluctuations; Principle of detailed balance, calculating thermodynamic averages

## UNIT - IV

Determining transition temperature using Binders cumulant, Solving differential equations, Linear, non-linear and coupled differential equations

## UNIT - V

Solving differential equations Schrodinger equation. in Quantum Mechanics with Numerov's algorithm and variational principle., Classical Molecular Dynamics simulations using Lennard-Jones' potential

### Suggested Texts and References:

1. Computational Physics: Problem Solving with Python, 3rd edition, Rubin H. Landau, Manuel J. Paez, Cristian C. Bordeianu
2. Computational Physics, Fortran Version, Steven E. Koonin, Dawn C. Meredith, CRC Press
3. Computational Physics, 2nd edition, Jos Thijsen, Cambridge Univ. Press
4. Computational Physics, T. Pang
5. Computational Physics (An Introduction to Monte Carlo Simulations of Matrix Field Theory), Ydri, Badis
6. Computer Programming in F90 & 95, V. Rajaraman, PHI learning pvt. Ltd
7. Numerical Recipes in F90 Cambridge Publishers
8. Computational Physics by Jos Thijsen (Cambridge Univ Press, 1997)
9. A first course in Computational Physics, P. L. DeVries and J. Hasbun, John Wiley and Sons. Inc.
10. Understanding Molecular Simulation, Publisher: Academic Press, Author: Daan Frenkel and Berend Smit.

## 6.4 P603: Condensed Matter Physics – I

### UNIT - I

Crystal Structure and x-ray diffraction: Crystalline and amorphous solids, translational symmetry. Elementary ideas about crystal structure, lattice and bases,

Handwritten signatures and initials at the bottom of the page, including names like 'Raj', 'Manuel', 'AB', 'VAT', 'Pjes', and 'RJR'.

## UNIT

cell, reciprocal lattice, fundamental types of lattices, Miller indices, lattice planes, simple cubic, f.c.c. and b.c.c. lattices. Simple crystal structures, Closed packed structure, Determination of crystal structure with X-rays, Neutrons and Electron diffraction-Diffraction of waves by crystals, Laue and Bragg equations, Brillouin Zones, Fourier Analysis of the basis. Debye waller factor, X ray broadening -size and temperature effects. X-ray diffraction of liquids and disordered solids- introduction to radial distribution functions.

## UNIT - II

Lattice Vibrations: Elastic waves, Thermal properties: Einstein's and Debye's theories of specific heats of solids, Thermal conductivity, Phonons, Lattice waves, Dynamics of a chain of similar atoms and chain of two types of atoms; optical and acoustic modes; Inelastic scattering of x-rays, neutrons and light by phonons, Optical properties of solids: interaction of light with ionic crystals. Raman scattering and Brillouin scattering.

## UNIT - III

The Free electron model: Drude Model, Electron conductivity, Heat capacity of conduction electrons, Fermi surface, Sommerfield model, Thermal conductivity of metals, Hall effect, AC conductivity and optical properties, Wiedemann-Franz law, Failure of the Free-electron model, optical properties of metals.

## UNIT - IV

Basics of Semiconductors and device: Crystal structure, Band structure, Intrinsic and extrinsic semiconductors, Concept of majority and minority carriers, Energy gap, Mobility, conductivity, Hall effect, Diffusion, Optical properties: Absorption, Luminescence, Photoconductivity, effect of disorder on absorption. Interpretation of energy band diagrams. Devices: p-n diode (derivation of Shockley equation), tunnel diode, photodiode, solar cell, LED, Lasers.

## UNIT - V

Superconductivity: Introduction (Kamerlingh Onnes experiment), effect of magnetic field, Type- I and type-II superconductors, Isotope effect. Meissner effect. Heat capacity. Energy gap. Electrodynamics of superconductivity: London's equation, Thermodynamics of the transition, Intermediate state of Type 1, Mixed state of type 2, Flux Quantization, Salient points of BCS theory, Cooper problem, Definition of coherence length, Josephson effect.

## Suggested Texts and References:

1. Elementary Solid State Physics, M. Ali Omar, Pearson Education 2008.
2. Introduction to Solid State Physics, 8th Edition, C. Kittel, Wiley 2012.
3. Solid State Physics, N. W. Ashcroft and N. D. Mermin, Cengage 2003.
4. Physics of Semiconductor Devices, 3rd Edition, S. M. Sze and K. K. Ng, 2007.
5. Introduction to Superconductivity, A. C. Rose -Innes, E. H. Rhoderik, Pergamon Press

6. Solid State Physics, J. P. McKelvey, Krieger Publishing Co. 1993.
7. Electron theory of solids, J. M. Ziman, Cambridge University Press, 2011.

## 6.5 P604: Lasers

### UNIT - I

Laser Characteristics – Spontaneous and stimulated emission, Einstein's quantum theory of radiation, theory of some optical processes, coherence and monochromaticity, kinetics of optical absorption, line broadening mechanism, Basic principle of lasers, population inversion, laser pumping, two & three level laser systems, resonator, Q-factor, losses in cavity, threshold condition, quantum yield.

### UNIT – II

Laser Systems- Solid state lasers- the ruby laser, Nd:YAG laser, ND: Glass laser, semiconductor lasers – features of semiconductor lasers, intrinsic semiconductor lasers, Gas laser -neutral atom gas laser, He-Ne laser, molecular gas lasers, CO<sub>2</sub> laser, Liquid lasers, dye lasers and chemical laser.

### UNIT - III

Advances in laser Physics, Production of giant pulse -Q-switching, giant pulse dynamics, laser amplifiers, mode locking and pulling, Non-linear optics, Harmonic generation, second harmonic generation, Phase matching, third harmonic generation, optical mixing, parametric generation and self-focusing of light.

### UNIT – IV

Multi-photon processes; multi-quantum photoelectric effect, Theory of two-photon process, three-photon process, second harmonic generation, parametric generation of light, Laser spectroscopy : Rayleigh and Raman scattering, Stimulated Raman effect, Hyper-Raman effect, Coherent anti-stokes Raman Scattering, Photo-acoustic Raman spectroscopy.

### UNIT – V

Laser Applications – ether drift and absolute rotation of the Earth, isotope separation, plasma, thermonuclear fusion, laser applications in chemistry, biology, astronomy, engineering and medicine. Communication by lasers: ranging, fiber Optics Communication, Optical fiber, numerical aperture, propagation of light in a medium with variable index, pulse dispersion.

### Suggested Texts and References:

1. Laud, B.B.: Lasers and nonlinear optics, (New Age Int.Pub.1996).
2. Thyagarajan, K and Ghatak, A.K.: Lasers theory and applications (Plenum press, 1981).

4. Seigman, A.E.: Lasers ( Oxford Univ. Press 1986)
5. Hecht, J.The laser Guide book (McGraw Hill, NY, 1986).

## 6.6 H 601 Ethics of Science and IPR

### UNIT - I

Introduction to Ethics– causes of unethical acts, Definition – moral, values, ethics; Role and importance of ethics in science; Professional ethics – professional conduct, Teaching ethical values to scientists, good laboratory practices, good manufacturing practices, Basic Approaches to Ethics; Posthumanism and Anti-Posthumanism.

### UNIT - II

Medical Ethics: Different themes pertaining to medical ethics including ethical issues in public health. Environmental Ethics, Bioethics, Journals and Publishers: Monopolistic practices by Academic Publishers. Plagiarism, softwares for plagiarism detection.

### UNIT- III

Introduction to IPR; Types of Intellectual property – Patents, Trademarks, Copyrights and related rights; Traditional vs. Novelty; Importance of intellectual property rights in the modern global economic environment, Importance of intellectual property rights in India.

### UNIT - IV

Patents: Definition, patentable and non patentable inventions; types of patent application – Ordinary, Conventional, PCT, Divisional, and Patent of addition; Concept of Prior Art; Precautions while patenting disclosure / nondisclosure;

### UNIT - V

Case studies and agreements - Evolution of GATT and WTO and IPR provisions under TRIPS; Madrid agreement; Hague agreement; WIPO treaties; Budapest treaty; Indian Patent Act (1970)

### Suggested Texts and References:

1. David B. Resnik 'The Ethics of Science: An Introduction', Routledge, New York, 1998
2. V. K. Ahuja 'Intellectual Property Rights in India', 2015
3. V. K. Ahuja 'Law Relating to Intellectual Property Rights', 2017.

## 6.7 PL601: Physics Laboratory – VI

Study of quantum mechanics through acoustic analogue (four sessions); Fourier analysis / synthesis – use of simulation; Study of characteristics of a coaxial cable and determination of speed of electromagnetic waves in the coaxial cable; determination of specific charge ( $e/m$ ) of electron; Study of Faraday rotation and determination of Verdit's constant in a glass material; investigation of chaos in a spring based coupled oscillator system; Introduction to workshop practice (two sessions); Introduction to vacuum practice (two sessions).

Handwritten signatures and initials at the bottom of the page, including a large signature on the left, a signature in the middle, and several other initials and signatures on the right, some with lines through them.

## 6.6 H 601 Ethics of Science and IPR

### UNIT - I

Introduction to Ethics– causes of unethical acts, Definition – moral, values, ethics; Role and importance of ethics in science; Professional ethics – professional conduct, Teaching ethical values to scientists, good laboratory practices, good manufacturing practices, Basic Approaches to Ethics; Posthumanism and Anti-Posthumanism.

### UNIT - II

Medical Ethics: Different themes pertaining to medical ethics including ethical issues in public health. Environmental Ethics, Bioethics, Journals and Publishers: Monopolistic practices by Academic Publishers. Plagiarism, softwares for plagiarism detection.

### UNIT- III

Introduction to IPR; Types of Intellectual property – Patents, Trademarks, Copyrights and related rights; Traditional vs. Novelty; Importance of intellectual property rights in the modern global economic environment, Importance of intellectual property rights in India.

### UNIT - IV

Patents: Definition, patentable and non patentable inventions; types of patent application – Ordinary, Conventional, PCT, Divisional, and Patent of addition; Concept of Prior Art; Precautions while patenting disclosure / nondisclosure;

## SEMESTER - VII

### 7.1 P701- Astronomy and Astrophysics - I

#### UNIT - I

An understandable universe, The scale of the universe, Continuous radiation from stars, Brightness of starlight, The electromagnetic spectrum, Colors of stars, Quantifying color, Blackbodies, Planck's law and photons, Stellar colors, Stellar distances, Absolute magnitudes

#### UNIT - II

Spectral lines in stars, Spectral lines, Spectral types, The origin of spectral lines, The Bohr atom, Quantum mechanics, Formation of spectral lines, Excitation, Ionization, Intensities of spectral lines The Hertzsprung-Russell diagram

#### UNIT - III

Telescopes, What a telescope does, Light gathering, Angular resolution, Image formation in a camera, Refracting telescopes, Reflecting telescopes, Observatories, Ground-based observing, Observations from space, Data handling, Detection, Spectroscopy, Observing in the ultraviolet, Observing in the infrared, Radio astronomy, High energy astronomy

#### UNIT - IV

The Sun: a typical star, Basic structure, Elements of radiation transport theory, The photosphere Appearance of the photosphere, Temperature distribution, Doppler broadening of spectral lines The chromosphere, The corona, Parts of the corona, Temperature of the corona, Solar activity Sunspots, Other activity

#### UNIT - V

Place, time, and motion: Astronomical coordinate systems, The third dimension, Time, Motion Names, catalogs, and databases: Star names, Names and catalogs of non-stellar objects outside the Solar System, Objects at non-optical wavelengths, Atlases and finding charts, Websites and other computer resources, Solar System objects

#### Suggested Texts and References:

1. Text book for UNIT I to IV : "Astronomy: A Physical Perspective" by Marc L. Kutner

2. Text book UNIT V : "To Measure the Sky: An Introduction to Observational Astronomy" by Frederick R. Chromey
3. References: Introduction to Modern Astrophysics by B. W. Carroll and D. A. Ostlie
4. An invitation to Astrophysics by T. Padmanabhan
5. Astrophysical Concepts by Martin Harwit
6. Introductory Astronomy and Astrophysics by Zelik and Gregory
7. Physical Universe by F. Shu

## 7.2 P702: Quantum Mechanics – III

### UNIT - I

Foundations (Introductory ideas): The EPR paradox, quantum entanglement; Bell's theorem, the No-clone theorem, Schrodinger's cat; Decoherence, quantum Zeno paradox.

### UNIT - II

Symmetry and Conservation Laws: Transformation of the Wave Function under Coordinate Transformations, Group of Symmetry of the Schrödinger Equation and the Conservation Laws, Homogeneity of Time and Space: Conservation of Energy and Momentum, Isotropy of Space: Conservation of Angular Momentum, Symmetry of the Hamiltonian and Degeneracy, Space Inversion Symmetry, Time Reversal Symmetry and Time Reversal Operator Kramers' Degeneracy and Kramers' Theorem

### UNIT - III

Relativistic Wave Equations: Generalization of the Schrödinger Equation, the Klein-Gordon equation, Plane Wave Solutions, Charge and Current Densities, Interaction with Electromagnetic Fields, Hydrogen-Like Atom, Nonrelativistic Limit

### UNIT - IV

The Dirac equation, Dirac's Relativistic Hamiltonian, Position Probability Density, Expectation Values, Dirac Matrices Plane Wave Solutions of the Dirac Equation; Energy Spectrum The Spin of the Dirac Particle, Significance of Negative Energy States; Dirac Particle in Electromagnetic Fields,

### UNIT - V

Relativistic Electron in a Central Potential: Total Angular Momentum, Radial Wave Equations in Coulomb Potential, Series Solutions of the Radial Equations: Asymptotic Behaviour, Determination of the Energy Levels, Exact Radial Wave Functions, Comparison to Non-Relativistic Case, Electron in a Magnetic Field—Spin Magnetic Moment, The Spin Orbit Energy

Handwritten signatures and initials at the bottom of the page, including "Ramesh" and "Raj" written over a horizontal line, and other illegible signatures below it.

## Suggested Texts and References:

1. **Text Book for UNIT I** : Introduction to Quantum Mechanics, 2nd Edition, D. J. Griffiths, Pearson Education 2008.
2. **Text Book for UNIT-II** : Fundamentals of Quantum Mechanics, Ajit Kumar, Cambridge university press

4. Relativistic Quantum Mechanics vol. 1: J. D. Bjorken and S. D. Drell, McGraw-Hill 1998
5. Intermediate Quantum Mechanics, H. A. Bethe and R. W. Jackiew, Perseus Books 1997
6. Quantum Field Theory, 2nd Edition, F. Mandl and G. Shaw, Wiley 2010
7. Advanced Quantum Mechanics, F. Schwabl, Springer 2008

## 7.3 P703: Statistical Mechanics – II

### UNIT - I

Transport theory using the relaxation time approximation; Boltzmann differential equation formulation; examples of the Boltzmann equation method. Stochastic Processes; Random Walk; Auto-catalytic processes.

### UNIT - II

Diffusion equation; Langevin equation; Fokker- Planck equation.

### UNIT - III

Ising Model; mean-field theory; Landau theory of second order phase transition; Peierls argument; the Bethe-Peierls approximation; Kramers-Wannier duality argument; Pade Approximant.

### UNIT - IV

Phase transition and Critical Phenomenon: critical exponents; exponent inequalities; static scaling hypothesis; block spins and the Kadanoff construction.

### UNIT - V

Renormalization Group: Decimation; Migdal-Kadanoff method; general renormalization group prescription; examples. Monte-Carlo Methods in statistical mechanics; Metropolis algorithm; Gillespie method.

Handwritten signatures and initials at the bottom of the page, including 'Rameel', 'AB', 'RS', and 'P2'.

## Suggested Texts and References:

4. A Modern Course in Statistical Physics, L. E. Reichl, Wiley 2009

## 7.4 P704: Nuclear Physics-I

### UNIT - I

Nuclear Properties: Size – nuclear radius, charge distribution, matter distribution. Mass- binding energy, liquid drop model/mass formula. Spin, Parity, isospin. Electromagnetic moments- magnetic dipole and electric quadrupole moments/nuclear shapes.

### UNIT - II

Nuclear stability, alpha, beta, gamma decays, fission. Experimental methods for size, mass, spin, moments to be included.

### UNIT - III

Nuclear Forces: Nuclear interaction, saturation of nuclear density, constancy of binding energy per nucleon. Bound two nucleon system, Deuteron problem, absence of bound pp, nn. N-N scattering – as a function of energy, phase shift, cross section. Salient features of nuclear force. Yukawa's theory of nuclear interaction (basics).

### UNIT - IV

Nuclear Structure: Magic numbers, shell model, spin orbit interaction, deformed shell model. Nuclear excited states vibration, rotation, Collective model. Electromagnetic interactions in nuclei: multipole transitions, selection rules, life times, electron capture, internal conversion, isomers, Coulomb excitation.

### UNIT - V

Nuclear Reactions: Kinematics, Q value, excitation energy, conservation laws, cross section, mean free path. Types of nuclear reactions, experimental observables, excitation function, angular distribution, spectra. Compound nuclear reactions, Resonances, level density, temperature, Bohr model. Direct nuclear reactions, optical model, pick up and stripping reactions, spectroscopic factor Nuclear fission and fusion reactions.

## Suggested Texts and References:

2. Concepts of Nuclear Physics, B. L. Cohen, McGraw Hill 1971
3. Introductory Nuclear Physics, S. S. M. Wong, Prentice – Hall 2010

Handwritten notes and signatures: "Lancel" and "RGR Phys" with several scribbles.

4. Introduction to Nuclear and Particle Physics, 2nd Edition, A. Das and T. Ferbel, World Scientific 2004

## 7.5 P704 Computational Physics - B (only for SEMESTER-VI students of session 2021-22)

### UNIT - I

Introduction of Fortran programming Language, Random Number generation and testing, Generation of random numbers with given distribution

### UNIT - II

Numerical Integration: (a) Deterministic: Trapezoidal method and (b) Multi-dimensional Integration using stochastic methods.

### UNIT - III

Lattice Monte Carlo simulations using Ising model to understand phase transitions: Metropolis algorithm, understanding kinetic barriers, finite size effects, role of thermal fluctuations, Metropolis algorithm, understanding kinetic barriers, finite size effects, role of thermal fluctuations; Principle of detailed balance, calculating thermodynamic averages

### UNIT - IV

Determining transition temperature using Binders cumulant, Solving differential equations, Linear, non-linear and coupled differential equations

### UNIT - V

Solving differential equations Schrodinger equation. in Quantum Mechanics with Numerov's algorithm and variational principle., Classical Molecular Dynamics simulations using Lennard-Jones' potential

### Suggested Texts and References:

10. Understanding Molecular Simulation, Publisher: Academic Press, Author: Daan Frenkel and Berend Smit

## 7.6 PL701: Advanced Physics Laboratory – I

### Nuclear Physics

Spectral features of photoelectric absorption and Compton scattering with scintillation detectors (i) Inorganic: NaI(Tl), BaF<sub>2</sub> (ii) Organic: BC501A and plastic. Energy calibration, energy resolution, photopeak and total efficiency, relative intensity, photoelectric and Compton cross-sections, radiation shielding. Alpha spectroscopy with a silicon surface barrier detector. Fine structure of alpha spectrum and determination of age of source. Fast timing and coincidence measurements using BaF<sub>2</sub> and BC501A detectors. Angular correlation of gamma rays using NaI(Tl) detectors. High resolution, low-energy photon measurements with a silicon drift detector: Internal conversion studies, elemental composition through X-Ray Fluorescence (XRF) analysis. Geiger-Muller counter: operating characteristics, dead time measurement, determination of mass absorption coefficient, verification of inverse square law. Lifetime measurements: from nanoseconds through minutes using fast coincidence and decay studies. High-resolution gamma ray measurements with high-purity germanium detectors. Classic experiments: Rutherford scattering, cloud chamber, beta spectrometer. Spectrum analysis techniques and fitting routines: data/peak fitting, energy and efficiency calibration, 1D and 2D histograms. (Selected experiments from the above list are performed based on number of contact hours prescribed)

### Condensed Matter physics

Growth of metallic thin films by physical vapor deposition techniques like thermal evaporation and DC magnetron sputtering. Tuning of growth parameters to change the deposition rate and hence thickness of the films. Introduction to vacuum techniques: vacuum pumps, rotary pump, diffusion pump and turbo molecular pumps. Measurement of vacuum: thermocouple gauges, hot and cold cathode gauges. Thickness measurement of thin films by quartz crystal monitor. Structural characterization of materials (some known and some unknown) by X-ray diffraction (XRD) and X-ray fluorescence (XRF) (a) Phase identification (b) Chemical composition (c) difference between powder diffraction pattern of single and polycrystalline systems (d) Reasons for line broadening in XRD: Rachinger correction and estimation of particle size from Debye-Scherrer formula. (e) Identifying crystal structure and determination of lattice constant.

### Introduction to low temperature measurements:

operation of a closed cycle cryostat, low temperature thermometers, controlling temperatures using PID feedback using temperature controllers, making electrical contacts on thin films and measuring DC resistance with sourcemeter using four probe method-advantages and disadvantages of the technique, temperature dependent (300-20K) measurement of electrical resistivity of metallic thin films and comparing the room temperature value with the standard. Determination of superconducting transition temperature of a high temperature superconductor using electrical transport measurements. Determination of band gap of a semiconductor: highly doped Si by fitting the temperature dependent

Handwritten signatures and initials at the bottom of the page, including names like 'Rameeb' and 'RQ'.

resistance to the standard variation in semiconductors. Concepts of measuring electrical resistance in labs: from metals to dielectrics. Introducing GPIB interfacing of electronic instruments with the computer and writing LABVIEW programs to interface temperature controller and sourcemeter.

### Introduction to phase sensitive measurements:

using of a dual phase lock-in amplifier. Measurement of the superconducting transition temperature of a superconducting thin film using a mutual inductance technique down to 2.6K (working of a cryogen free system). Measuring AC resistance of a milliohm resistor using phase sensitive detection and studying the frequency and amplitude variation of the resistance: introduction to noise, White noise and 1/f noise.

6. Introduction to Solid State Physics, 8th Edition, C. Kittel, Wiley 2012.

## 7.7 PPr701: Reading Project

Reading project will be assigned by the supervisor.

*Vanacels*

*Pys*

## SEMESTER - VIII

### 8.1 P801: Astronomy and Astrophysics

#### UNIT - I

Stellar Physics: Equations governing the structure of stars: Mechanical & Thermal equilibrium. Virial theorem. Modes of energy transfer in stars: radiative & convective transport of energy. Auxiliary input: equation of state, opacity and energy generation by thermonuclear processes. Boundary conditions at the stellar surface & at the centre. The main sequence, Stellar energy sources, Gravitational potential energy of a sphere, Gravitational lifetime for a star, Other energy sources, Nuclear energy for stars, Overcoming the fusion barrier, Stellar structure, Hydrostatic equilibrium, Energy transport, Stellar models, Solar neutrinos

#### UNIT - II

Stellar old age, Evolution off the main sequence, Low mass stars, High mass stars, Cepheid variables, Variable stars, Cepheid mechanism, Period-luminosity relation, Planetary nebulae, White dwarfs, Electron degeneracy, Properties of white dwarfs, Relativistic effects

#### UNIT - III

The death of high mass stars, Supernovae, Core evolution of high mass stars, Supernova remnants, Neutron stars, Neutron degeneracy pressure, Rotation of neutron stars, Magnetic fields of neutron stars, Pulsars, Discovery of Pulsars, What are pulsars?, Period changes, Pulsars as probes of interstellar space, Stellar black holes

#### UNIT - IV

THE MILKY WAY - OUR GALAXY: An overview of the Milky Way, The mass of the Milky Way, The disc of the Milky Way, The stellar halo and bulge of the Milky Way, The formation and evolution of the Milky Way, NORMAL GALAXIES: The classification of galaxies, The determination of the properties of galaxies, The determination of the distances of galaxies, The formation and evolution of galaxies, ACTIVE GALAXIES: The spectra of galaxies, Types of active galaxies, The central engine, Models of active galaxies, Outstanding issues

#### UNIT - V

Cosmology, The scale of the universe, Expansion of the universe, Olbers's paradox Keeping track of expansion, Cosmology and Newtonian gravitation, Cosmology and general relativity, Geometry of the universe, Cosmological redshift, Models of the universe, Is the universe open or closed?

39

Handwritten signature

## Suggested Texts and References:

1. Text Book UNIT I to IV : "Astronomy: A Physical Perspective" by Marc L. Kutner
2. Text Book for UNIT V : "An introduction to Galaxies and cosmology" Edited by Mark H. Jones and Robert J. Lambourne, Cambridge University Press.
3. References: The Internal Constitution of Stars, A. S. Eddington, Cambridge University Press, 1988.
4. An Introduction to the Study of Stellar Structure, S. Chandrasekhar, Dover Publications, 2003.
5. The structure & Evolution of the Stars, M. Schwarzschild, Dover Publications, 1962.
6. Cox and Giuli's Principles of Stellar Structure, 2nd Ed., A. Weiss et al., Cambridge, 2003.
7. The Physical Universe: An Introducing to Astronomy, F. H. Shu, University Science Books, 1982.
8. Galactic Astronomy, James Binney and Michael Merrifield, Princeton University Press, 1998.
9. An Introduction to Active Galactic Nuclei, B. M. Peterson, Cambridge University Press, 1997.

## 8.2 P802: Fluid Mechanics

### UNIT - I

Validity of hydrodynamical description. Kinematics of the flow field. Stress-strain relationship. Basic equations governing conservation of mass, momentum & energy.

### UNIT - II

Navier-Stokes equation for viscous flows. Shear and bulk viscosity and radiative diffusivity in fluids. Viscous and thermal boundary layers, Potential flows, Water waves. Kelvin's circulation theorem, Stokes's flow Lubrication theory.

### UNIT - III

Virial theorem in the tensor form. Magnetohydrodynamic flows. Generalized Ohm's law in the presence of Hall current & Ambipolar diffusion, Magneto-gravity-acoustic modes.

### UNIT - IV

Classical hydrodynamic and hydromagnetic linear stability problems: Rayleigh-Taylor and Kelvin-Helmholtz instabilities. Jeans' gravitational instability; Benard convection. Parker instability and magnetic buoyancy. Thermal instability. Non-linear Benard problem.

### UNIT - V

Spherical accretion flows onto compact objects and accretion disks. High Speed flow of gases. Shock waves and blast waves. Supernova hydrodynamics. Physiological hydrodynamics. Blood flow in human heart.

A series of handwritten signatures and initials in black ink, including a circled 'M', a stylized 'A', a signature that looks like 'R&S', a signature that looks like 'R', a signature that looks like 'Lameels', and a signature that looks like 'R&S' with a large flourish.

## Suggested Texts and References:

1. Hydrodynamics, 6th Edition, H. Lamb, Dover 1945
2. An Introduction to Fluid Dynamics, G.K. Batchelor, Cambridge University Press, 2000
3. Fluid Mechanics, 2nd Edition, L.D. Landau and E.M. Lifshitz, Elsevier 1987

## 8.3 P803: Nuclear and Particle Physics

### UNIT - I

Nuclear Reactions: Partial wave decomposition, phase shifts and partial wave analysis of the cross sections in terms of phase shifts. Behaviour of phase shifts in different situations. Black sphere scattering. Optical theorem and reciprocity theorem. Unitarity Optical potential: Basic definition. Relation between the imaginary part,  $W$  of the OP and  $\sigma$  abs, and between  $W$  and mean free path. Folding model and a high energy estimate of the OP.

### UNIT - II

Categorisation of Nuclear Reaction mechanisms: Low energies: Discrete region, Continuum Region: (a) Discrete Region: Decaying states. Relation between the width and the mean life time. Energy definition: Lorentzian or Breit- Wigner. Resonance scattering. Derivation of the resonance cross section from phase shift description of cross section. Transmission through a square well and resonances in continuum. Coulomb barrier penetration for charged particles scattering and centrifugal barrier for  $l$  non-zero states. Angular distributions of the particles in resonance scattering. Application to hydrogen burning in stars. (b) Continuum Region: Bohr's compound nucleus model.

### UNIT - III

Direct Reactions: Cross section in terms of the T-matrix. Phase space, and its evaluation for simple cases. Lippmann Schwinger equation for the scattering wave function, and its formal solution. On-shell and off-shell scattering. Plane wave and distorted wave approximation to the Tmatrix(PWBA, DWBA). Application to various direct reactions like, stripping, pick-up, knockout etc.High energy scattering. Glauber theory. Eikonal approximation to the scattering wave function.Evaluation of scattering cross section in eikonal approximation. Introduction to heavyion scattering and the physics with radioactive ion beams.

### UNIT - IV

Nuclear Structure: Generalization of the single-particle shell model, residual interactions, Fermi gas model. Single-particle energies in a deformed potential, shell corrections and the Strutinski method. Pairing: BCS model and the Bogolyubov transformation. Hartree-Fock method: general variational approach, Hartree-Fock equations and applications. Nuclear shape parametrization, quadrupole and higher- order deformations. Collective rotation and vibration; Giant resonances. Cranking model, phenomena at high spin including super-deformation. introduction to Density- Functional Models, including relativistic mean field. Selected contemporary research topics: Superheavy nuclei; Spectroscopy of drip-line nuclei.

*(Handwritten signatures and initials)*

## UNIT - V

Particle Physics: Symmetries and conservation laws, conserved quantities in reactions of particles. Relativistic kinematics in particle reactions, invariants, resonances, decays of resonances and their decays etc. Particle classification, mesons and baryons, SU(3) multiplets, quark model. Quarks, gluons, QCD interaction, colour neutrality. Detection of quarks and gluons, structure function in deep inelastic reactions. Quark and lepton families, weak interactions as gauge theory, W and Z bosons. Symmetry breaking and generation of masses, Higgs bosons. Present boundary (strings, grand unification, matter- anti-matter asymmetry, dark matter and energy - seminar, qualitative)

### Suggested Texts and References:

1. Subatomic Physics, E. M. Henley & A. Garcia, World Scientific
2. Concepts of Nuclear Physics, B. C. Cohen, McGraw-Hill.
3. Introduction to Nuclear and Particle Physics, A. Das and T. Ferbel, World Scientific.
4. Structure of the Nucleus: M.A. Preston and R.K. Bhaduri, Levant Books, 2008
5. Nuclear Models: W. Greiner and J.A. Maruhn, Springer, 1996
6. Nuclear Structure from a Simple Perspective: R. F. Casten, Oxford University Press, 1990
7. Theory of Nuclear Structure: M.K. Pal, Affiliated East-West Press, 1982
8. An Introduction to Quarks and Partons, F. E. Close, Academic Press 1980
9. Quarks and Leptons: An Introductory Course in Modern Particle Physics, F. Halzen and A. D. Martin, John Wiley 1984
10. Introduction to High Energy Physics, 4th Edition, D. Perkins, Cambridge 2000.

## 8.4 P804: Condensed Matter Physics – II

### UNIT - I

Superconductivity: Revision, Introduction to second quantization, BCS theory, Electron tunneling and energy gap, Josephson effect (AC and DC). GL theory and concept of penetration depth, coherence length and surface energy, Flux quantization.

### UNIT - II

Modified London Equation of Mixed Phase, Interaction between Flux tubes, Flux flow, Flux pinning, Magnetization of Mixed State: Bogoliubov transformation, Boundary between normal metal and superconductor, Andreev Reflection and Proximity effect.

### UNIT - III

Magnetism: Quantum theory of magnetism: Rationalization of the Heisenberg Hamiltonian, Hubbard model and Stoner Model: Derivation of susceptibility, Spin wave using Holstein- Primakov transformation.

Handwritten signatures and scribbles at the bottom of the page, including the word 'Lamuch' written in a cursive style.

## UNIT - IV

Introduction to Density Functional Theory Introduction to Special topics: Integer and Fractional Quantum hall effect, unconventional superconductivity, frustrated magnets, Josephson junction qubits, Graphene physics, Topological insulators.

## UNIT - V

Kondo Physics, Metamaterials, Physics of photonic band gap materials, quantum cascade lasers, free electron lasers, organic electronics etc.

### Suggested Texts and References:

1. Introduction to Superconductivity, 2nd Edition, M. Tinkham, Dover 2004
2. Superconductivity, J. B. Ketterson and S. N. Song, Cambridge 1999
3. Basic Solid State Physics by A. K. Raychaudhuri
4. Magnetism in Solids, D. H. Martin, Butterworth 1967
5. Quantum theory of Magnetism, 3rd Edition, R. M. White, Springer 2006
6. Electronic Structure, Basic Theory & Practical Methods, R. Martin, Cambridge 2008.

## 8.5 PL801: Advanced Physics Laboratory – II

### Introduction to Observational Astronomy:

Transmission of radiation through atmosphere in different bands, need for space platforms for invisible astronomies, Introduction to Optical, Infrared, Ultra-violet, X-ray and Gamma-ray astronomy, what do we measure and learn from different wavebands.

### Introductory Astronomy and Different types of Optical Telescopes:

Astronomical parameters like Apparent and Absolute magnitude, Flux, Luminosity and its dependence on size and temperature of stars, Atmospheric Extinction, Coordinate System in Astronomy Refracting and Reflecting telescopes, different focal plane configurations, their applications and relative merits and demerits. Reflectivity and its wavelength dependence, "seeing" and factors affecting it, use of active and adaptive optics in modern telescopes to overcome atmospheric and thermal effects, calculation of focal length, focal ratio, magnification, field of view, plate scale, diffraction limit of telescopes.

### Introduction to Focal Plane Detectors for Optical, infrared and UV astronomy:

Developments and evolution of modern Optical and Infrared imaging detectors: Photographic Plates, Phototubes, Image Intensifiers, Charge Coupled Devices (CCDs), Bolometers and how they work, their characterization and parameters (charge transfer efficiency, quantum efficiency, flat fielding etc.). CCDs uses in Imaging, morphological and Spectroscopic studies, Infrared Detectors and IR Arrays, UV Imaging and Photon Counting Detectors.

Handwritten signatures and initials at the bottom of the page, including a large signature on the left, a signature in the middle, and a signature on the right with the name 'Kamali' written above it.

## Different types of Focal Plane Instruments:

Imagers, Photometers, Fast Photometers for photon counting, limitations of PMT and CCD bases photometers, Importance of spectroscopy, Design and description of Low and High Resolution Spectrometers and their applications, Polarimeters and their applications.

## Interaction of radiation with matter:

(a) Passage of charged and neutral particles through matter, Ionization loss formulae and dependence on different parameters, relativistic rise in ionization loss, detection of neutrons, Bremsstrahlung process, Cerenkov radiation and its application (b) Interaction of photons with matter: Photoelectric interaction, mass absorption formula and dependence on energy, atomic number etc, Thompson scattering, Compton scattering, Pair production process, formula and dependence on energy, atomic number, radiation length, critical energy

## Introduction to Different Types of Gas-Filled Radiation Detectors:

Role of development of new detection techniques in new discoveries in high energy physics and astrophysics, different kind of detection techniques for charged and neutral radiation Dependence of charge multiplication on high voltage and pressure, Townsend coefficient, need for use of inert gases, quench gas, mobility of electrons and ions (a) Ionization Chamber (IC), description of a typical IC, its characteristics, application of IC in physics (b) Proportional Counters (PC): Single and multi cell PCs, filling gases, Penning effect, charge multiplication process, energy resolution of PC, Fano factor, use of PCs in high energy physics, and astronomy especially in X-ray astronomy (c) Geiger Mueller (GM)Counter: Typical GM counter, its characteristics, applications of GM counter

## Scintillation Counters, Cerenkov Detectors and other Solid State Detectors:

Scintillation processes, dependence on energy, charge and atomic number, Photomultiplier (PMT) for detection of light, PMT characteristics, charge multiplication and use of PMTs with scintillators (a) Organic Scintillation Counters: Plastic Scintillators and light yield, their use in charged particle detection, a typical PS detector and its characteristics (b) Inorganic Scintillation Counters: Scintillation medium and need for activators, Sodium Iodide (NaI) and Caesium Iodide detectors, their light output, application of these detectors in physics and astrophysics (c) Silicon detectors and their applications in X-ray Astronomy, Germanium Detectors, Cadmium -Telluride devices and their arrays

## Observational X-ray Astronomy:

Birth and evolution of X-ray Astronomy, different types of X-ray sources, Discovery of X-ray Binaries, their broad properties, optical identification, classification in Low Mass X-ray binaries (LMXBs) and High Mass X-ray Binaries (HMXBs), their unique characteristics, estimation of mass of the compact star in X-ray binaries from the binary parameters (a) Neutron Star Binaries (NSB): X-ray Pulsars in Binaries, Rotation powered pulsars in SNRs, detailed discussion of their timing and spectral properties, New physics and astrophysics learnt from their studies (b) Black Hole Binaries (BHB): Inference about black hole nature, time variability, spectral measurements, mass of black hole

Handwritten signatures and initials at the bottom of the page, including a large signature on the left, a signature in the middle, and several initials and names on the right, such as 'V. Kamech' and 'R. P. Pys'.

## X-ray Radiation Processes:

(a) Thermal Emission, Black Body emission, Thermal Bremsstrahlung (free-free emission), spectral line formation in thermal plasma, examples of thermal spectra, measurement of temperature and elemental abundances from spectral data (b) Non-thermal Emission: Synchrotron mechanism (magnetic bremsstrahlung), spectral shape, polarized emission, Inverse Compton Scattering, spectrum of radiation, examples of non-thermal spectra, Cyclotron process in strongly magnetized stars and formation of cyclotron lines, determination of magnetic field of the stars

## Experiments to be performed:

1. Measuring energy resolution (R) of a Cadmium Telluride Detector using X-rays of different energies (E) from radioactive sources and deriving expression for variation of R with E.
2. Solar Constant measurement.
3. Measurement of Solar Limb Darkening.
4. Observing an Optical Binary Star and deriving its light curve.
5. Determine Pulsation period and binary light curve of an accreting Neutron star from X-ray data.
6. Measuring X-ray Energy Spectrum of a Black Hole Binary and fit it with different spectral models.
7. Characteristics of a Proportional Counter and dependence of its energy resolution on different parameters of the PC.

## SEMESTER - IX

### 9.1 PPr901: Project

Project will be assigned by the supervisor.

Manuel  

## SEMESTER - X

### 10.1 PE - 1: Quantum Field Theory

#### UNIT - I

Preliminaries: Why Quantum Field Theory, Creation and annihilation operators, Special relativity, Space and time in relativistic quantum theory, natural units

#### UNIT - II

Canonical Quantization: General Formulation. Conjugate Momentum and Quantization. Neutral Scalar Field. Commutation Relations, Normal Ordering, Bose Symmetry, Fock Space. Charged Scalar Field. U(1) Invariance, Charge Conservation, Particles and Antiparticles. Time Ordered Product, Feynman Propagator for Scalar Fields, Bose- Einstein Distribution, Propagators at Finite Temperature.

#### UNIT - III

Dirac Field: The Dirac Equation, Relativistic Covariance. Anti-Commutators. Quantization of the Dirac Field, Electrons and Positrons. Connection between Spin and Statistics. Discrete Symmetries, Parity, Charge Conjugation, Time Reversal, CPT Theorem.

#### UNIT - IV

Gauge Field: Gauge Invariance and Gauge Fixing. Quantization of the Electromagnetic Field, Propagator, Vacuum Fluctuations.

#### UNIT - V

Interacting Theory and Elementary Processes: Wick's Theorem. Feynman Rules and Feynman Diagrams for Spinor Electrodynamics, Lowest Order Cross-Section for Electron-Electron, Electron-Positron and Electron- Photon Scattering.

#### Suggested Texts and References:

1. Quantum Field Theory, C. Itzykson and J. B. Zuber, McGraw-Hill Book Co, 1985.
2. Quantum Field Theory, L. H. Ryder, Cambridge University Press, 2008.
3. Field Theory, A Modern Primer, P. Ramond, Benjamin, 1980.
4. The Quantum Theory of Fields, Vol I, S. Weinberg, Cambridge University Press, 1996.

A series of handwritten signatures and initials in blue ink, including a stylized 're', a signature that appears to be 'L.H. Ryder', a signature with '17' next to it, a signature that looks like 'Ramond', a signature that looks like 'Itzykson', and a signature that looks like 'Zuber'.

5. Introduction to The Theory of Quantum Fields, N. N. Bogoliubov and D. V. Shirkov, Interscience, 1960.
6. An Introduction to Quantum Field Theory, M. E. Peskin and D. V. Schroeder, Westview Press, 1995.
7. Quantum Field Theory: Mandl and Shaw
8. A first book of Quantum Field Theory, Amitabha Lahiri, Palash B. Pal, Alpha Science International Ltd., 2000

## 10.2 PE - 2: General Relativity and Cosmology

### UNIT - I

Review of Newtonian Mechanics. Special theory of relativity. Prelude to General relativity, historical developments, 4-Vectors and 4-tensors, examples from physics

### UNIT - II

Principle of Equivalence, Equations of motion, Gravitational force, Tensor Analysis in Riemannian space, Effects of Gravitation, Riemann-Christoffel curvature tensor, Ricci Tensor, Curvature Scalar, Einstein Field Equations, Experimental tests of GT, Scwartzchild Solution,

### UNIT - III

Introduction to Cosmology, The cosmic history and inventory, The expanding Universe

### UNIT - IV

Friedmann Equations and Cosmological Models, The Standard cosmological model, The inflationary Universe, Big-Bang Hypothesis

### UNIT - V

Primordial nucleosynthesis and the thermal history of the Universe. Perturbations in an expanding Universe, Growth of perturbations, Dark Matter Halos

### Suggested Texts and References:

1. A first course in General Relativity- B. Schutz
2. Gravity: HJ. Hartle
3. The Classical Theory of Fields: Landau and Lifshitz
4. Gravitation and Cosmology: S. Weinberg

5. Introducing Einstein's General Relativity - Ray D'Inverno
6. The Early Universe - Kolb and Turner

7. Introduction to Cosmology - Barbara Ryden
8. Modern Cosmology - Scott Dodelson
9. Principles of Physical Cosmology - P.J.E. Peebles
10. Large Scale Structure of the Universe - P.J.E. Peebles
11. Structure Formation in the Universe - T. Padmanabhan

## 10.3 PE - 3: Experimental Techniques

### UNIT – I

Vacuum technology: gases, gas flow, pressure and flow measurement, vacuum pumps, pumping mechanisms, ultrahigh vacuum, leak detection

### UNIT – II

Optical systems: optical components, optical materials, optical sources Charge particle optics: electrostatic lenses, charged-particle sources, energy and mass analyzer

### UNIT – III

Detectors: optical detectors, photoemission detectors, particle and ionizing radiation detectors, signal to noise ration detection, surface barrier detector.

### UNIT – IV

Particle detectors and radioactive Decay: Interactions of charged particles and photons with matter; gaseous ionization detectors, scintillation counter, solid state detectors

### UNIT – V

Electronics: electronic noise, survey of analog and digital I/Cs, signal processing, data acquisition and control systems, data analysis evaluation

### Suggested Texts and References:

2. Building Scientific apparatus by J. H. Moore et al.
3. Experiments in Modern Physics, Second Edition by Adrian C. Melissinos, Jim Napolitano
4. Vacuum Technology, A. Roth North-Holland Publisher
5. Charge Particle Beams, by Stanley Humphries, John Wiley and Sons
6. Principles of charged Particles Acceleration, by Stanley Humphries, John Wiley and Sons
7. Radiation detection and Measurements, G. Knoll, 3rd Edition

8. Techniques for Nuclear and particles physics experiments, W. R. Leo, 2nd edition, Springer
9. The Physics of Micro & Nanofabrication, Ivor Brodie, and Julius J. Murray, Springer
10. Physical Principles of Electron Microscopy: An Introduction to TEM, SEM, and AEM, R. Egerton, Springer, 2005
11. Egerton, Springer, 2005 Modern Spectroscopy, J. M. Hollas, John Wiley, 4th Edition, 2004

## 10.4 PE - 4: CCD Imaging and Spectroscopy

### UNIT - I

Introduction : Why use CCDs?, CCD manufacturing and operation, CCD operation, CCD types, CCD coatings, Analog-to-digital converters

### UNIT - II

Characterization of charge-coupled devices: Quantum efficiency, Charge diffusion, Charge transfer efficiency, Readout noise, Dark current, CCD pixel size, pixel binning, full well capacity, and windowing, Overscan and bias, CCD gain and dynamic range,

### UNIT - III

CCD imaging, Photometry and astrometry: Image or plate scale, Flat fielding, Calculation of read noise and gain, Signal-to-noise ratio, Basic CCD data reduction, CCD imaging, Stellar photometry from digital images, Two-dimensional profile fitting, Difference image photometry, Aperture photometry, Absolute versus differential photometry, High speed photometry, PSF shaped photometry, Astrometry, Pixel sampling

### UNIT - IV

Review of spectrographs: CCD spectrographs, CCD spectroscopy, Signal-to-noise calculations for spectroscopy, Data reduction for CCD spectroscopy, Extended object spectroscopy, Slitless spectroscopy

### UNIT - V

CCDs used in space and at short wavelengths : CCDs in space, Radiation damage in CCDs, CCDs in the UV and EUV (300–3000 Å) spectral range, CCDs in the X-ray, (< 500 Å) spectral range

### Suggested Texts and References:

## 10.5 PE - 5: Biophysics

### UNIT - I

Mathematical Methods in Biophysics : Functions of One Variable and Ordinary Differential Equations, Functions of Several Variables: Diffusion Equation in One Dimension., Random Walks and Diffusion, Random Variables, Probability Distribution, Mean, and Variance , Diffusion Equation in Three Dimensions., Complex Numbers, Complex Variables, and Schrodinger's Equation , Solving Linear Homogeneous Differential Equations., Fourier Transforms, Nonlinear Equations: Patterns, Switches and Oscillators

### UNIT - II

Quantum Mechanics Basic to Biophysical Methods: Quantum Mechanics Postulates, . One-Dimensional Problems, The Harmonic Oscillator, The Hydrogen Atom, Approximate Methods, Many Electron Atoms and Molecules , The Interaction of Matter and Light

### UNIT - III

Computational Modeling of Receptor-Ligand Binding and Cellular Signaling Processes: Differential Equation-Based Mean-Field Modeling, Application: Clustering of Receptor-Ligand Complexes, Modeling Membrane Deformation as a Result of Receptor-Ligand Binding, Limitations of Mean-Field Differential Equation-Based Modeling, Master Equation: Calculating the Time Evolution of a Chemically Reacting System,

### UNIT - IV

Stochastic Simulation Algorithms: Stochastic Simulation Algorithm (SSA) of Gillespie, Application of the Stochastic Simulation Algorithm (SSA), Free Energy-Based Metropolis Monte Carlo Simulation, Application of Metropolis Monte Carlo Algorithm, Stochastic Simulation Algorithm with Reaction and Diffusion: Probabilistic Rate Constant-Based Method, Mapping Probabilistic and Physical Parameters, Modeling Binding between Multivalent Receptors and Ligands, Multivalent Receptor-Ligand Binding and Multi-molecule Signaling Complex Formation, Application of Stochastic Simulation Algorithm with Reaction and Diffusion, Choosing the Most Efficient Simulation Method

## UNIT - V

Fluorescence Spectroscopy: Fundamental Process of Fluorescence, Fluorescence Microscopy, Types of Biological Fluorophores, Application of Fluorescence in Biophysical Research, Dynamic Processes Probed by Fluorescence Electrophysiological Measurements of Membrane Proteins : Membrane Bioelectricity, . Electrochemical Driving Force, Voltage Clamp versus Current Clamp, Principles of Silver Chloride Electrodes, Capacitive Current and Ionic Current. Gating and Permeation Functions of Ion Channels, Two-Electrode Voltage Clamp for *Xenopus* Oocyte Recordings , Patch-Clamp Recordings , Patch-Clamp Fluorometry

## 10.6 PE - 6: Particle Physics

### UNIT - I

Elementary particles, discrete symmetries and conservation laws, Symmetries and Quarks.

### UNIT - II

Klein-Gordon equation, concept of antiparticle, Lorentz symmetry and scalar / vector / spinor fields.

### UNIT - III

Dirac equation, Scattering processes of spin-1/2 particles (Feynmans rules as thumb rule QFT course), propagators.

Handwritten signatures and initials at the bottom of the page, including a circled 'C', a signature that appears to be 'R', and several other illegible signatures and initials.

## UNIT - IV

Current-current interactions, weak interaction, Fermi theory, Gauge symmetries, spontaneous symmetry breaking, Higgs mechanism

## UNIT - V

Electroweak interaction, Glashow-Salam-Weinberg model, Introduction to QCD, structure of hadrons (form factors, structure functions), parton model, Deep inelastic scattering.

### Suggested Texts and References:

Bucksbaum, 1983, Cambridge University Press

## 10.7 PE - 7: Nonlinear Dynamics and Chaos

### UNIT - I

Dynamical Systems, phase portraits, vector fields, nullclines, flows, discrete dynamical systems, 1-d maps. Fixed points, linearization of vector fields, canonical forms, generalized eigenvectors, semisimple - nilpotent decomposition, Jordan canonical form.

### UNIT - II

Classification of fixed points. Hartman -Grobman theorem, homeomorphism, Stable Manifold Theorem, Centre Manifold Theorem, examples of manifolds. Index theory, Lyapunov functions and stability analysis, Limit cycles, Poincare-Bendixon Dynamical Systems, phase portraits, vector fields, nullclines, flows, discrete dynamical systems, 1-d maps, Fixed points.

### UNIT - III

Linearization of vector fields, canonical forms, generalized eigen vectors, semisimple-nilpotent decomposition, Jordan canonical form, classification of fixed points. Hartman-Grobman theorem, homeomorphism, Stable Manifold Theorem, Centre Manifold Theorem, examples of manifolds. Index theory, Lyapunov functions and stability analysis, Limit cycles, Poincare-Bendixon Theorem. Gronwall's inequality.

### UNIT - IV

The Variational Equation, exploring neighbourhoods, Lyapunov exponents, Monodromy matrix, Floquet exponents. Bifurcations: Saddle-Node, Transcritical, Pitchfork and Hopf Bifurcation. 1-d maps,

Handwritten signatures and initials at the bottom of the page, including a circled 'R', 'Eun', 'AAR', 'B', 'Lancelotti', 'B', and 'Bj'.

linear stability of fixed points and higher order fixed points, chain rule, Lyapunov exponent, bifurcation diagram, finding period-n orbits in 1-d maps. 2-d maps, Linearization, the Henon map.

## UNIT - V

Poincaré surface of section. Symbolic dynamics, Sensitivity to initial conditions, Chaos, Partitions, Transition matrix, Entropies, Smale Horseshoe. Invariant density, the Perron-Frobenius operator. Fractals. Hamiltonian Dynamics.

2. Chaos: An Introduction to Dynamical Systems, K.T. Aligood, T.D. Sauer, J.A. Yorke, Springer 2000
3. Differential Equations, Dynamical Systems and an Introduction to Chaos, M. Hirsh, S. Smale and R. Devaney, Elsevier Academic Press, 2012
4. Chaos and Integrability in Nonlinear Dynamics: An Introduction, M. Tabor, John Wiley & Sons, 1989
5. Chaos: Classical and Quantum, P. Cvitanovic et al.

## 10.8 PE - 8: Reactor Physics and Radiation Science

### UNIT - I

Fission process: Liquid drop model, fission rate, reactor power, prompt and delayed neutrons, fission gammas, fission products energy balance, photo neutrons. Fissile, fertile and fissionable materials. Fission product activity and decay heat after shut down. Interaction of Neutrons with Matter: Production of neutrons and nuclear reactions with thermal and fast neutrons, transmutation.

### UNIT - II

Concept of microscopic cross section: Inelastic and elastic scattering, Maxwell-Boltzmann distribution and its departure. Variation of cross-section with energy, fast, resonance and thermal ranges.  $1/v$  law of neutron cross-section, Resonance absorption, Doppler effect.  $\eta$  vs  $E$  curve, conversion & breeding concepts-Thorium utilization. Diffusion of neutrons: Fick's law and its validity, steady state neutron diffusion equation, concepts of neutron flux and current, interface conditions, diffusion coefficient, diffusion length and extrapolation distance.

### UNIT - III

Chain Reaction: Four Factor formula, conceptual treatment of diffusion of one group neutrons in non multiplying and multiplying media, infinite and effective multiplication factors bare homogeneous reactor-concepts of material and geometric buckling, sub criticality and super criticality, critical mass, non leakage probabilities in bare homogeneous cores, neutron cycle and lifetime in finite and in infinite reactor system. Slowing down process: Neutron slowing down, slowing down power and moderating ratio for moderators. Slowing down with spatial migration, Fermi age concepts, migration length,

use of reflectors/blankets, reflector savings. Heterogeneous reactors: Multigroup neutron diffusion with special reference to 2 group approach, Heterogeneous reactors, comparison with homogeneous reactors, unit cell concepts.

## UNIT - IV

Reactor kinetics: Time dependent neutron diffusion equation, one group kinetic equation, prompt neutron life time, Point kinetic model to illustrate importance of delayed neutrons, reactor period, reactivity and its units. Fuel burn-up units. Neutron Poisons: Xenon and Samarium Poisons, Xenon loads (operating and post shutdown), Variation of xenon load with power and enrichment. Xenon oscillations and their control.

## UNIT - V

Reactivity coefficients: Temperature coefficients of reactivity and void coefficient of reactivity, their relevance to reactor safety. techniques to control reactors, typical reactivity balance, longterm burnup, fuel management. Reactor control system – requirements of physics aspects. Reactor shutdown mechanisms and neutron monitoring during operation and shut down. Approach to criticality, physics measurements and calibrations/validations. Reactivity worth measurements of control rods. Research Reactors at Trombay, Indian PHWRs.

1. Nuclear Reactor Engineering: Reactor Systems Engineering, Samuel Glasstone and Alexander Sesonske, 4th Edition, 2012
2. Introduction to Nuclear Engineering, 3rd Ed., John R. Lamarsh and Anthony J. Baratta, 2001.
3. Nuclear Reactor Analysis, James J. Duderstadt and Louis J. Hamilton, 1976
4. Nuclear Energy: An Introduction to the Concepts, Systems, and Applications of Nuclear
5. Processes, 6th Ed., Raymond Murray and Keith E. Holbert, 2008.
6. Fundamentals of Nuclear Reactor Physics, Elmer E. Lewis, 2008.
7. Nuclear Reactor Physics, 2nd Ed., Weston M. Stacy, 2007
8. Nuclear Energy: Principles, Practices and Prospects, David Bodansky, 2008.

## 10.9 PE - 9: Accelerator Physics and Applications

### UNIT - I

Transverse beam dynamics: Accelerator coordinates; Canonical transformation to accelerators coordinates; Guide field; Dipole and Quadrupole Magnets; Hills equation and solution; Twiss parameters; Matrix formulation; Dispersion; Design of lattices; Field and gradient errors; Chromaticity; sextupole magnets and dynamics aperture.

Handwritten signatures and initials in blue ink at the bottom of the page, including a large 'R' on the left, a signature that appears to be 'Lamarsh', and other illegible initials and marks.

## UNIT - II

Longitudinal beam dynamics: Fields and forces; acceleration by time varying fields; relativistic equations; Overview of acceleration; transit time factor; main RF parameters; momentum compaction factor; transition energy; Equations related to synchrotron; synchronous particle; synchrotron oscillations; principle of phase stability; RF acceleration for synchronous and for non-synchronous particle; small amplitude oscillations; Oscillations with Hamiltonian formalism; limits of stable region; adiabatic damping.

## UNIT - III

Linear accelerators: Basic methods of linear acceleration; Fundamental parameters of accelerating structures; Energy gain in linear accelerating structures; Q, Shunt-impedance, transit-time factor; periodic accelerating structures; RFQs; Microwave topics for linacs; Single particle dynamics in linear accelerators; Multi-particle dynamics in linear accelerators.

## UNIT - IV

Synchrotron radiation: Introduction to electromagnetic radiation; Radiation of accelerated charged particles; radiation from wigglers and undulators; Electron dynamics with radiation; Low emittance lattices; synchrotron radiation sources.

## UNIT - V

Free-electron lasers: Introduction; electron dynamics in the undulator; spontaneous emission; electron dynamics in the laser field; dynamics of the laser field; dimensionless equations of motion; solution in the small-signal, small-gain regime; Madey theorem; three-dimensional effects; undulators; X-ray laser. Advanced accelerator concepts: Photo injectors; laser-wakefield acceleration; plasma-wakefield acceleration; linear colliders; muon colliders.

### Suggested Texts and References:

2. An Introduction to Particle Accelerators, Edmund Wilson
3. Introduction to Accelerator Physics, Arvind Jain
4. R. F. Linear Accelerators, T. P. Wangler
5. Classical Electrodynamics, 3rd Edition, J. D. Jackson, Wiley 2012

## 10.10 PE - 10: Computational Physics - C

### UNIT - I

Introduction of Fortran programming Language, Random Number generation and testing, Generation of random numbers with given distribution

## UNIT - II

Numerical Integration: (a) Deterministic: Trapezoidal method and (b) Multi-dimensional Integration using stochastic methods.

## UNIT - III

Lattice Monte Carlo simulations using Ising model to understand phase transitions: Metropolis algorithm, understanding kinetic barriers, finite size effects, role of thermal fluctuations, Metropolis algorithm, understanding kinetic barriers, finite size effects, role of thermal fluctuations; Principle of detailed balance, calculating thermodynamic averages

## UNIT - IV

Determining transition temperature using Binders cumulant, Solving differential equations, Linear, non-linear and coupled differential equations

## UNIT - V

Solving differential equations Schrodinger equation. in Quantum Mechanics with Numerov's algorithm and variational principle., Classical Molecular Dynamics simulations using Lennard-Jones' potential

10. Understanding Molecular Simulation, Publisher: Academic Press, Author: Daan Frenkel and Berend Smit

## 10.11 PE - 11: Glimpses of Contemporary Sciences

### UNIT - I

Physics in life systems: size and scale, diffusion, cell locomotion, force generated by actin growth and flagellum rotatory motion, ion channels, resting potential across the membrane, nerve conduction velocity, action potential, macromolecules of life, random walk model of polymer, single molecular experiments, optical tweezers, magnetic tweezers.

### UNIT - II

Complex systems: dynamical chaos, logistic map, bifurcation, Universality, Feigenbaum constants, Mechanical demonstrations of chaos, Nanomechanical oscillators, Patterns, Reaction-diffusion systems, Nodal patterns, thermodynamics and human population, Falling leaves, Smoke ring physics.

### UNIT - III

At the turn of 1900: Silver threads, Discovery of the electron, Rutherford's nuclear atom Wien's law, Black-body radiation and Max Planck's action.

### UNIT - IV

Astrophysics, Astrochemistry and Astrobiology

### UNIT - V

Quantum mechanics, atoms : Entanglement Light-atom interaction, Bringing atoms to rest, Laser tweezers, How bright is laser, Quantum computing.

### Suggested Texts and References:

1. "Growth and Forms" by Darcy Wentworth Thompson
2. "Physical biology of the cell" by Rob Phillips
3. "Random walks in biology" by Howard Berg
4. "Physics: Structure and Meaning" by L. Cooper
5. "The Feynman Lectures on Physics vol. 3" by R.P.Feynman, R.B.Leighton and M. Sands

## 10.12 PE - 12: Earth Science and Energy & Environmental Sciences

### UNIT - I

Earth Science:

Origin of the earth, type of rocks in different layers, their physical and chemical properties, mechanism of their formation and destruction. Radioactivity and its role in geochronology, Plate tectonics and geodynamics and the role of mantle plumes in sustaining these processes.

## UNIT - II

Gravity, electrical and magnetic properties of the different layers in the earth. Their variations in different geological terrains. Instrumentation, field procedures used in these studies. Response of the earth to the elastic (Seismic) and electromagnetic waves, use of this phenomena to study the earth's interior.

## UNIT - III

Geodynamo and the internal magnetic field of the earth. Paleomagnetic studies, Polar wandering and reversal, possible theoretical arguments for understanding the phenomena. Seismology and its use in understanding of the different layers in the earth's interior. Utility of the different geophysical techniques (discussed above) in exploration for academic as well as for harnessing resources.

## UNIT - IV

Energy and Environmental Sciences:

Introduction to Environmental Science. Natural Environments: Ecosystems and ecology, biodiversity. Socio-cultural environments: demography, population density, human organizations. Land use and its planning. Global climate change and effects on environment. Carbon cycle from human activity, calculation of carbon budgets. Water harvesting, storage and treatment. Natural calamities, hazards, and effects of human activity: Chemical and other technological hazards. Various case studies of natural calamities and human-induced disasters. Causes, effects, forecasting, preparedness, planning measures, technological solutions, social interventions. Concept of sustainability, individual and social, and local and global actions for a sustainable future.

## UNIT - V

Introduction to energy Sources - evolution of energy sources with time. Power production, per capita consumption in the world, and relation to development index. Energy scenario in India: Various issues related to consumption and demands - energy crisis issues in India. Renewable and non-renewable energy sources - technology and commercialization of energy sources, local (decentralized) versus centralized energy production, constraints and opportunities of renewable energy (hydrocarbon and coal based energy sources). Energy conservation - calculation of energy requirements for typical and home and industrial applications. Alternative to fossil fuels - solar, wind, tidal, geothermal. Bio-based fuels. Hydrogen as a fuel. Energy transport and storages, comparison of energy sources - passage from source to delivery (source, production, transport, delivery) - efficiencies, losses and wastes. Nuclear energy: Power production: Components of a reactor and its working, types of reactors and comparison. India's three stage nuclear program. Nuclear fuel cycle. Thorium based reactors. Regulations on nuclear energy.

## 10.13 PE - 13: Circuits and Electronics

### UNIT - I

Analysis of Nonlinear Circuits: Introduction to Nonlinear Elements, Analytical Solutions, Graphical Analysis, Piecewise Linear Analysis, Improved Piecewise Linear Models for Nonlinear Elements, Incremental Analysis

The Digital Abstraction: Voltage Levels and the Static Discipline, Boolean Logic, Combinational Gates, Standard Sum-of-Products Representation, Simplifying Logic Expressions, Number Representation

### UNIT - II

The MOSFET Switch: The Switch, Logic Functions Using Switches, The MOSFET Device and Its S Model, MOSFET Switch Implementation of Logic Gates, Static Analysis Using the S Model, The SR Model of the MOSFET, Physical Structure of the MOSFET, Static Analysis Using the SR Model, Static Analysis of the NAND Gate Using the SR Model, Signal Restoration, Gain, and Nonlinearity, Signal Restoration and Gain, Signal Restoration and Nonlinearity, Buffer Transfer Characteristics and the Static Discipline, Inverter Transfer Characteristics and the Static Discipline, Power Consumption in Logic Gates, Active Pull-ups

The MOSFET Amplifier : Signal Amplification, Review of Dependent Sources, Actual MOSFET Characteristics, The Switch-Current Source (SCS) MOSFET Model, The MOSFET Amplifier, Biasing the MOSFET Amplifier, The Amplifier Abstraction and the Saturation Discipline, Large-Signal Analysis of the MOSFET Amplifier,  $v_{IN}$  Versus  $v_{OUT}$  in the Saturation Region, Valid Input and Output Voltage Ranges, Alternative Method for Valid Input and Output Voltage Ranges, Operating Point Selection, Switch Unified (SU) MOSFET Model

The Small-Signal Model: Overview of the Nonlinear MOSFET Amplifier, The Small-Signal Model, Small-Signal Circuit Representation, Small-Signal Circuit for the MOSFET Amplifier, Selecting an Operating Point, Input and Output Resistance, Current and Power Gain.

### UNIT - III

Energy Storage Elements: Constitutive Laws, Capacitors, Inductors, Series and Parallel Connections, Capacitors, Inductors, MOSFET Gate Capacitance, Wiring Loop Inductance, IC Wiring Capacitance and Inductance, Transformers, Sinusoidal Inputs, Step Inputs, Impulse Inputs, Role Reversal, Energy,

Charge, and Flux Conservation.

First-Order Transients in Linear Electrical Networks, Analysis of RC Circuits: Parallel RC Circuit, Step Input; RC Discharge Transient; Series RC Circuit, Step Input; Series RC Circuit, Square-Wave Input; Analysis of RL Circuits: Series RL Circuit, Step Input; Intuitive Analysis, Propagation Delay and the Digital Abstraction, Definitions of Propagation Delays, Computing  $t_{pd}$  from the SRC MOSFET Model, State and State Variables, The Concept of State, Computer Analysis Using the State Equation, Zero-Input and Zero-State Response, Solution by Integrating Factors, Effect of Wire Inductance in Digital Circuits, Ramp Inputs and Linearity, Response of an RC Circuit to Short Pulses and the Impulse Response, Intuitive Method for the Impulse Response, Clock Signals and Clock Fanout, RC Response to Decaying Exponential, Series RL Circuit with Sine-Wave Input, Digital Memory, The Concept of Digital State, An Abstract Digital Memory Element, Design of the Digital Memory Element, A Static Memory Element.

Energy and Power in Digital Circuits: Power and Energy Relations for a Simple RC Circuit, Average Power in an RC Circuit and energy dissipation, Power Dissipation in Logic Gates, Static Power Dissipation, Total Power Dissipation, NMOS Logic, CMOS Logic, CMOS Logic Gate Design.

## UNIT - IV

Transients in Second-Order Circuits: Undriven LC Circuit, Undriven, Series RLC Circuit, Under-Damped Dynamics, Over-Damped Dynamics, Critically-Damped Dynamics, Stored Energy in Transient, Series RLC Circuit, Undriven, Parallel RLC Circuit, Under-Damped Dynamics, Over-Damped Dynamics, Critically-Damped Dynamics, Driven, Series RLC Circuit, Step Response, Impulse Response, Driven, Parallel RLC Circuit, Step Response, Impulse Response, Intuitive Analysis of Second-Order Circuits, Two-Capacitor or Two-Inductor Circuits, State-Variable Method, State-Space Analysis, Numerical Solution, Higher-Order Circuits

Sinusoidal Steady State: Impedance and Frequency Response, Analysis Using Complex Exponential Drive, Homogeneous Solution, Particular Solution, Complete Solution, Sinusoidal Steady-State Response, The Boxes: Impedance and its examples.

Frequency Response: Magnitude and Phase versus Frequency, Frequency Response of Capacitors, Inductors, and Resistors; Intuitively Sketching the Frequency Response of RC and RL Circuits; The Bode Plot: Sketching the Frequency Response of General Functions;

Filters, Filter Design Example: Crossover Network, Decoupling Amplifier Stages, Time Domain versus Frequency Domain Analysis using Voltage-Divider Example, Frequency Domain Analysis, Time Domain Analysis, Comparing Time Domain and Frequency Domain Analyses, Power and Energy in an Impedance, Arbitrary Impedance, Pure Resistance, Pure Reactance, Power in an RC Circuit

Sinusoidal Steady State: Resonance, Parallel RLC, Sinusoidal Response; Homogeneous Solution, Particular Solution, Total Solution for the Parallel RLC Circuit, Frequency Response for Resonant Systems, The Resonant Region of the Frequency Response, Series RLC, The Bode Plot for Resonant Functions, Band-pass Filter, Low-pass Filter, High-pass Filter, Notch Filter, Stored Energy in a Resonant Circuit.

## UNIT - V

The Operational Amplifier Abstraction: Historical Perspective, Device Properties of the Operational Amplifier, The Op Amp Model, Simple Op Amp Circuits, The Non-Inverting Op Amp, The Inverting Connection, Sensitivity, A Special Case: The Voltage Follower, An Additional Constraint:  $v^+ - v^- \cong 0$ , Input and Output Resistances, Output Resistance, Inverting Op Amp, Input Resistance, Inverting Connection, Input and Output R For Non-Inverting Op Amp, Generalization on Input Resistance, Op Amp Current Source, Adder, Subtractor, Op Amp RC Circuits,, Op Amp In-

tegrator, Op Amp Differentiator, An RC Active Filter, The RC Active Filter Impedance Analysis, Sallen-Key Filter, Op Amp in Saturation, Op Amp Integrator in Saturation, Positive Feedback, RC Oscillator, Two-Ports.

Diodes, Semiconductor Diode Characteristics, Analysis of Diode Circuits, Method of Assumed States, Nonlinear Analysis with RL and RC, Peak Detector, Clamping Circuit, A Switched Power Supply using a Diode, Clipping Circuit, Exponentiation Circuit, Limiter, Full-Wave Diode Bridge, Zener-Diode Regulator, Diode Attenuator
