

M.A. / M.Sc. Anthropology

The Master of Science/Art in Anthropology program is a two-year, four-semester program premeditated to endow with students with a wide-ranging thoughtful of sophisticated anthropological doctrine and their applications in overall development of humankind. Anthropology is a holistic science and its nature is bio-cultural or bio-social it shapes anthropology as a unique science. This uniqueness of anthropology provides its multidisciplinary nature and it's also provides student to multiple job opportunities. Through a balanced curriculum covering diverse areas, students learn a well-built foundational knowledge of anthropology during the preliminary semesters. As the program progresses, students have the suppleness to upgrade their learning by choosing electives specialized course i.e., Biological and Social-Cultural Anthropology that make strengthen with their interests and career targets. At the completion of the programme, students will be able to be well prepared for diverse career paths including education, research, administration, technology and non-governmental organization (NGO) sectors. Through a concrete anthropological background, they will be skilled at as efficient policy planner, executer, thinker, and advocates of marginalized and tribal peoples and social doctor and contribute effectively to various fields of betterment of humankind. Being a transdisciplinary subject, anthropology permeates among every discipline with definite modes of applications. It is only for the sake of convenience that the subject matter is divided into branches. Anthropology has a role to play in promoting communal harmony, tolerance, co-existence and world peace by using the instrument of culture and concept of cultural relativism.

Program Outcomes:

Upon successful completion of the Master of Science/ Art in Anthropology program, students will be able to:

PO-1	Knowledge: Demonstrate and deliver deep understanding of advanced anthropological concepts, theories, methods, and laboratory and field techniques in various branches, field and subfield of Anthropology. Anthropology is a discipline for the future since it draws linkages between past, present and future, and has predictive ability.
PO-2	Critical Thinking and Reasoning: Spread over analytic thought to a body of knowledge, analyse and evaluate evidence, arguments, claims, beliefs on the basis of empirical evidence of anthropological philosophy, establish the ability to evaluate the reliability and relevance of evidence, identify logical flaws and holes in the arguments of others, analyse and synthesise data from a variety of sources, draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.
PO-3	Problem Solving: Express capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge and apply one's learning to real life situation. Utilize the anthropological concepts, theories, methods and processes to eradicate contemporary social pathological problems and conflicts. Especially remove the backwardness and marginalization among the downtrodden peoples of the society by the using anthropological doctrine.

PO-4	Advanced Analytical and Computational Skills: Demonstrate the ability to evaluate the reliability and relevance of evidence, identify logical flaws and holes in the arguments of others, analyse and synthesise data from a variety of sources, draw valid conclusions and support them with evidence and examples to addressing opposing viewpoints. Possess advanced skills in computation, including proficiency in using advance software for quantitative data analysis.
PO-5	Effective Communication: The student of anthropology has able to rapport-building with not only the common citizen but unknown tribal and rural societies as well because the students of anthropology are trained with fieldwork techniques. Express thoughts and ideas effectively in writing and orally, communicate with others using appropriate media, confidently share one’s views and express herself/himself, demonstrate the ability to listen carefully, read and write analytically, and present complex information in a clear and concise manner to different groups.
PO-6	Interdisciplinary Interaction: Demonstrate ability to work effectively and respectfully with diverse teams, facilitate cooperative or coordinated effort on the part of a group, and act together as a group or a team in the interests of a common cause and work efficiently as a member of a team. Establish knowledge of the values and beliefs of multiple cultures and a global perspective, effectively engage in a multicultural society, interact respectfully with diverse groups.
PO-7	Self-directed and Life-long Learning: Determine the ability to acquire knowledge and skills, including ‘learning how to learn’ that are necessary for participating in learning activities throughout life, through self-paced and self-directed learning aimed at personal development, meeting economic, social and cultural objectives, and adapting to changing trades and demands of work place through knowledge/skill development/reskilling.
PO-8	Effective Citizenship: Leadership and Innovation: Prove capability for mapping out where one needs to go to "win" as a team or an organization, and set direction, formulate an inspiring vision, build a team who can help achieve the vision, motivate and inspire team members to engage with that vision, and use management skills to guide people to the right destination in a smooth and efficient way.
PO-9	Ethics: Demonstrate the ability to embrace moral/ethical values in conducting one’s life, formulate a position/argument about an ethical issue from multiple perspectives, and use ethical practices in all work. Demonstrate the ability to identify ethical issues related to one’s work, avoid unethical behaviour such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights, appreciate environmental and sustainability issues, and adopt objective, unbiased and truthful actions in all aspects of work.
PO-10	Further Education or Employment: Engage for further academic pursuits, including Ph.D. programs in anthropology or other related bio-social fields. Get employment in academia, research institutions, industry, non -government organisation (NGOs), government, international agencies like WHO, UNICEF, UNESCO, UNFAP, USAID etc., and other sectors.

PO-11	<p>Global Perspective: As we know “anthropology is the study of man and his work” therefore their recognition is global nature because where man there is anthropology. Anthropology understands the changing scenario in the wake of information technology leading to explosion of knowledge, and the shrinking world, and forces of globalisation threatening diversities and identities. Anthropology has a potential to develop its identity as Queen of all Sciences since it is sitting on the gold mine of rich data, created and being created by dynamic human endeavour.</p>
-------	--

PROGRAMME SPECIFIC OUTCOMES (PSOs): At the end of the program, the student will be able to:

PSO1	Understand fundamental and systematic or coherent thoughtful of the academic field of Anthropology, its different branches and applications, and its linkages with related disciplinary areas/subjects procedural knowledge that creates different types of professionals related to the disciplinary/subject area of Anthropology, including professionals engaged in research and development, teaching and government/public service, and NGOs.
PSO2	Utilize the knowledge of Anthropology in formulating and tackling Anthropology-related problems and identifying and applying appropriate anthropological principles and methodologies to solve a wide range of problems associated with humankind.
PSO3	Pursue research in challenging areas of pure/applied anthropology. Plan and execute Anthropology-related experiments or field investigations, analyse and interpret data/information collected using appropriate methods, including the use of appropriate software such as programming languages and purpose-written packages. Report accurately the findings of the experiment/field investigations while relating the conclusions/findings to relevant theories of Anthropology.
PSO4	Reveal professional behaviour such as being objective, unbiased and truthful in all aspects of work and avoiding unethical behaviour, identify the potential ethical issues in work-related situations, appreciation of intellectual property, environmental and sustainability issues, and promoting safe learning and working environment
PSO5	Qualify national level tests like NET, selected through UPSC, State level PCSs/PSCs; establish NGOs, research institutes etc.

Note:

- In place of Elective Course Student can choose paper(s) from MOOC Courses (Swayam Portal) subject to the following conditions:
 - The chosen paper will be other than the papers offered in the current course structure.
 - The paper will be PG level with a minimum of 12 weeks' duration.
 - The list of courses on SWAYAM keeps changing, the departmental committee will finalize the list of MOOC courses for each semester.
 - The paper(s) may be chosen from Swayam Portal on the recommendation of Head of the Department.
- The candidates who have joined the PG Programme in School of Studies (University Teaching Department), shall undergo Generic Elective Courses (only qualifying in nature) offered by other departments/SoS in Semester II and Semester III.

3. The candidates, who have joined the PG Programme in School of Studies (University Teaching Department), shall undergo Skill Enhancement Course/Value Added Course (only qualifying in nature) in Semester I and Semester II.

Anthropology (Semester-I)

Skill Enhancement/Value Added Courses: (Offered to the PG students of SoS in Anthropology)

Semester	Course Code	Course Title	Course Type (T/P)	Hrs/Week	Credits	Marks

Learning Objective (LO):

The course aims to apply acquired knowledge to analyze and interpret human biological diversity. Demonstrate the ability to critically evaluate the complexities of racial classification and its relevance in anthropological studies.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Explore the relationships between Physical Anthropology and other scientific disciplines, as well as the specific historical and contemporary context of Physical Anthropology in India. The inclusion of "New Physical Anthropology" suggests a focus on recent advancements, emphasizing the dynamic and evolving nature of the field.	U
2	Deep understanding of the theories that explain the processes of organic evolution, from historical perspectives to contemporary insights also emphasizes the evolutionary position of humans in the animal kingdom and delves into the behavior of primates.	U
3	Understanding of the comparative anatomy between humans and apes, focusing on skeletal and anatomical features. They will explore the evolutionary history of hominids, including the crucial transition to bipedalism and provides insights into the adaptations and evolutionary trends that shaped the human form over time.	U
4	Describe the concept of race, the models used to explain human variation, and the criteria and challenges associated with racial classification. Explore the multifaceted causes of human variation, recognizing the intricate nature of the factors that contribute to the diversity observed among human populations.	An

M.A/M.Sc. (Anthropology) Semester-I

Program	Subject	Year	Semester
M.A/M.Sc.	Anthropology	1	I
Course Code	Course Title		Course Type
ANTH160	Practicals in Osteology and Osteometry		Core
Credit	Hours Per Week (L-T-P)		
	L	T	P
3	-	-	6
Maximum Marks	CIA		ESE
100	30		70

* L- Lecture, T- Tutorial, P- Practical

Learning Objective (LO):

The importance of this course for the students is a comprehensive understanding of human skeletal bones, osteometric measurements and their applications in biological anthropology and forensic science. They should also develop practical skills for accurate measurements and ethical considerations when working with human remains.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Knowledge of human skeletal bones, their measurements, and the application of osteometric analysis.	Ap
2	Students will learn about the description and osteometric measurements of various human skeletal bones, including the clavicle, scapula, humerus, radius, ulna, and femur.	Ap
3	This information is crucial in biological anthropology and forensic science for understanding human skeletal variations and contributing to the identification of individuals.	Ap
4	The hands-on experience with measurements and angles provides students with practical skills for analyzing skeletal remains in anthropological and forensic contexts.	Ap

CL : Cognitive Levels (R-Remember; U-Understanding; Ap-Apply; An-Analyze; E-Evaluate; C-Create).

Learning Objective (LO):

This learning outcome aim to equip students with a comprehensive understanding of the cultural, social, and biological aspects of health and disease, preparing them for work in the field of Medical Anthropology. Understand the importance of a judicious mix of qualitative and quantitative research methods in evaluating health programs and interventions.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Comprehensive understanding of the cultural dimensions of health and medicine, exploring diverse perspectives on healing, disease prevention, and varied healthcare systems across different societies. They will also learn how cultural beliefs and practices influence individual and community well-being.	U
2	Comprehensive understanding of epidemiology and its application to study the occurrence and distribution of diseases.	Ap
3	Apply and analyze the statistical tools and qualitative tools for research in health, medicine, religion, culture, public health promotion, nutrition, reproductive and child health, family welfare, health education for aging populations	Ap
4	Understand and evaluate the historical context of national health policies, the dynamics of healthcare delivery in diverse settings, the role of voluntary efforts in community health, and the application of anthropological methods in health systems research.	E

Learning Objective (LO):

The objective of this course is to equip students with a solid understanding of the history, principles, and methods of human genetics. They should be able to apply their knowledge to analyze and interpret inheritance patterns, understand the molecular basis of genetics, and appreciate the complexity of genetic variation in human populations.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Understanding of the historical context, the core concepts, and the molecular mechanisms that govern genetic inheritance in humans. The knowledge acquired in these areas is foundational for further studies in genetics, genomics, and related fields.	U
2	This part of the syllabus delves deeper into the mechanisms of cell division, the practical application of Mendelian principles in human genetics, and various methods used to study heredity in human populations.	U
3	The syllabus delves into the genetics of blood groups, including the inheritance patterns of multiple alleles in different blood group systems. These topics are relevant in medical genetics, transfusion medicine, and population genetics.	Ap
4	Understanding these inheritance patterns is crucial for predicting and explaining the transmission of traits in families and populations, and it forms the basis for genetic counseling and research in human genetics.	Ap

Learning Objective (LO):

The objective of this course is to develop a profound comprehension of fieldwork skills, ethical considerations, and independent research capabilities and the ability to work collaboratively with communities, analyze data, and communicate their findings through a well-structured fieldwork report

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	The course aims to provide students with hands-on experience in conducting fieldwork, with an emphasis on practical skills such as rapport building, data collection, analysis, and report writing.	Ap
2	Students gain valuable insights into the complexities of anthropological research and develop the capacity to undertake independent research programs in the future.	Ap
3	Understanding the strengths and limitations of different data collection techniques and selecting appropriate methods based on research objectives.	Ap
4	Learn how to compile and present fieldwork findings in the form of a comprehensive report. Developing skills in data analysis, interpretation, and effective communication of research results.	Ap

Unit No.	Topics	No. of Lectures	CO No.
	The course is designed to make the student carry out field work in the planning of project proposal, data collection, data analysis and report writing under the guidance of teacher assigned by the Head of the department using conventional and scientific methods at various stages of the field dissertation. The course aims at capacity building of the student in taking up independent research programmes. The students are required to work with the community for a period of 7-10 days in the village. Two typed copies of analyzed data is to be submitted in the department in the form of a Field work Report

M.A/M.Sc. (Anthropology) Semester- III

Program	Subject	Year	Semester
M.A/M.Sc.	Anthropology	2	III
Course Code	Course Title		Course Type
ANTH 353	Anthropology of Ageing		Core
Credit	Hours Per Week (L-T-P)		
	L	T	P
5	5	1	-
Maximum Marks	CIA		ESE
100	30		70

* L- Lecture, T- Tutorial, P- Practical

Learning Objective (LO):

This course aims to impart students with a profound comprehension of biological aging, various dimensions of age, challenges and rewards associated with aging, societal attitudes, and the impact of aging on cognitive functions. Students should also be familiar with intergenerational relationships, community resources, and the global aspects of aging.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	The interdisciplinary approach combines biological and anthropological viewpoints, offering a holistic understanding of the aging process and its implications for individuals and societies.	U
2	Students will likely gain insights into the scientific, social, and ethical considerations surrounding aging, providing a holistic understanding of the challenges and opportunities associated with an aging population.	Ap
3	Students will learn about the dynamics, challenges, and rewards of relationships across different age groups, with a focus on understanding aging experiences in diverse social and cultural contexts.	Ap
4	Students will gain insights into the complexities of aging experiences and explore strategies for combating age-related stereotypes and biases. The syllabus encourages critical thinking about aging within the broader social and cultural context.	Ap

CL: Cognitive Levels (R-Remember; U-Understanding; Ap-Apply; An-Analyze; E-Evaluate; C-Create).

Learning Objective (LO):

The aim of this course is to build strong understanding of molecular genetics, including nucleic acid structure, DNA organization, gene transcription, various molecular techniques, polymorphism, mutation, repair, gene mapping, genomic imprinting, protein synthesis, DNA sequencing, and the applications of genomic technology in various fields. Understanding of the Human Genome Project and the use of molecular genetics in prenatal diagnosis and genetic counselling.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Detailed understanding of the molecular mechanisms involved in the storage and expression of genetic information.	Ap
2	Students will gain practical knowledge of key molecular genetics techniques, from manipulating DNA using recombinant DNA technology to analyzing gene expression and protein presence using various methods.	An
3	Depth knowledge of genetic variation, mutation, and repair, as well as the molecular processes involved in gene mapping, gene expression, and protein synthesis.	An
4	Applications of genomic technology, including its use in forensic sciences for DNA profiling. The syllabus also covers the significant undertaking of the Human Genome Project and explores the critical aspects of prenatal diagnosis and genetic counseling for molecular disorders.	An

Learning Objective (LO):

This course aims to impart students with a profound comprehension of the skills and knowledge necessary for the effective conservation and preservation of various types of museum objects, ensuring their longevity and maintaining their cultural and historical significance.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Comprehensive understanding of the principles and techniques involved in the conservation and preservation of a wide range of museum objects made from different materials.	U
2	Management of the museum artifacts, storage, display and labelling etc.	Ap
3	Identify causes of decay and deterioration in museum objects. Implementing Integrated Pest Management strategies. Learning methods for treating objects affected by insect infestations.	Ap
4	Describe Strategies for preserving materials of plant origin, including wood, bamboo, bark, basketry, fibers, textiles, books, paper, and paintings on paper and cloth.	Ap

CL: Cognitive Levels (R-Remember; U-Understanding; Ap-Apply; An-Analyze;E-Evaluate;C-Create).

Learning Objective (LO):

To learn about the basic ideas in Anthropological Symbolism and the leading symbolic anthropologists. Critically examine and evaluate the theory especially in the context of religion, rituals, kinship and polity etc. And to identify, classify, interpret the symbols and write a report on the basis of a fieldwork lasting for a week.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Understand the theory of symbolic anthropology, setting the stage for further exploration and research in the field.	U
2	Critically analyze how symbols operate in diverse cultural contexts, recognizing the dynamic nature of symbolism and its role in shaping human behavior, communication, and societal structures.	An
3	A comprehensive overview of the diverse ways in which scholars have contributed to the understanding of symbols, rituals, and cultural meaning within the field of anthropology.	U
4	Analyse and evaluate how symbolism permeates daily life, influencing perceptions, communication, and cultural expression.	An

Learning Objective (LO):

The course aims to equip students with the knowledge and skills required to ecological anthropology, its historical development, key concepts, and its relevance to contemporary environmental issues. Students should gain a critical perspective on the relationship between human societies and their environments, as well as the role of anthropologists in addressing environmental challenges.

Course Outcomes (CO):

CO No.	Expected Course Outcomes At the end of the course, the students will be able to:	CL
1	Comprehensive understanding of ecological anthropology, covering its foundational concepts, interdisciplinary nature, historical development, and major branches. The syllabus emphasizes the evolution of ecological anthropology beyond cultural ecology into diverse branches that explore the intricate relationships between humans and their environments.	U
2	The syllabus highlights the evolution of anthropological thought towards more dynamic and context-specific understandings of the relationships between humans and their environments.	Ap
3	The course emphasizes the interconnectedness of human culture and the natural environment, providing a holistic perspective on the relationships between humans and their ecosystems.	Ap
4	Students will gain knowledge about the complex interplay between human activities and the environment, including the various environmental problems and issues at local and global scales. The course also addresses the relationship between development and environmental challenges, introducing the concept of sustainable development..	Ap

Learning Objective (LO):

The primary objective of this course is to empower students with the fundamental principles required to work with the genetic basis of various medical conditions, syndromes, and disorders. They should be able to apply genetic principles to identify and analyze the causes of these conditions and understand their implications for diagnosis and treatment in a medical context.

Course Outcomes (CO):

CO No.	Expected Course Outcomes At the end of the course, the students will be able to:	CL
1	Foundation for understanding how genetics plays a crucial role in human health and disease, with practical applications in the medical field. Students will gain knowledge about the fundamentals of Medical Genetics, including its meaning and scope, the application of genetic principles in medicine, and the causation of genetic diseases, defects, and disorders.	U
2	The course will cover the genetic basis of each disorder, including their clinical manifestations, inheritance patterns, and the underlying molecular mechanisms. This knowledge is crucial for healthcare professionals involved in the diagnosis, treatment, and genetic counseling of individuals with these conditions.	Ap
3	The genetic basis of each disorder, including their clinical features, inheritance patterns, and the underlying molecular mechanisms. This knowledge is essential for healthcare professionals involved in the diagnosis, management, and genetic counseling of individuals with these genetic conditions.	Ap
4	Knowledge about various disorders affecting the respiratory, cardiovascular, kidney and urino-genital, and endocrine systems. This understanding is essential for healthcare professionals involved in the diagnosis, management, and genetic counseling of individuals with these genetic conditions..	Ap

Learning Objective (LO):

The primary objective of this course is to empower students with the fundamental principles required to work with the forensic science field, particularly in the areas of identification and analysis of human remains. Understand the ethical and legal responsibilities associated with providing forensic anthropological expertise in court proceedings. Evaluate the age, sex, and ethnic attributes of individuals based on skeletal features.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Collection and preservation of skeletal remains, as well as the techniques used to assess the time and cause of death. Additionally, students will be prepared for the role of a forensic anthropologist as an expert witness in legal proceedings, requiring effective communication and presentation of forensic findings in a courtroom setting.	Ap
2	Comprehensive understanding of forensic anthropology and osteology, focusing on the establishment of identity through the analysis of skeletal remains. This includes detailed knowledge of human bone anatomy, techniques for determining age, sex, and ethnic attribution, as well as the use of human dentition for forensic analysis..	Ap
3	Determination and identification of individuals in forensic anthropology, with a specific focus on fingerprint and sole print analysis. The course will cover the detailed characteristics of ridge and crease patterns, introduce dermatoglyphic indices, and highlight the forensic significance of dermatoglyphics.	An
4	Knowledge about various forensic methods for personal identification, encompassing somatometric and somatoscopic observations, hair analysis, bloodstain pattern analysis, and the use of bodily fluids for forensic serology. The course will cover both macroscopic and microscopic features, as well as DNA analysis techniques for accurate and reliable identification in forensic investigations.	An

Learning Objective (LO):

The objective of the course is to provide students a comprehensive understanding of ethnomedicine, including its cultural, spiritual, and ritualistic aspects. They should be able to analyze and interpret various ethnomedical practices, considering the diverse perspectives on health and healing within different cultural contexts.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Students will gain a nuanced understanding of ethnomedicine, disease, illness, health, and sickness. The course explores how these concepts are shaped by cultural, social, and historical factors, emphasizing the importance of cultural perspectives in understanding health and healing practices within diverse communities.	U
2	Explore the cultural perceptions of body image and the multifaceted symbolism associated with the human body in natural, social, cosmological, political, and spiritual contexts. This knowledge is crucial for understanding health and healing practices within diverse cultural frameworks.	Ap
3	Identify and explain of traditional health care practices, including beliefs and practices related to mother and child health. They will explore the roles of traditional medical practitioners, different types of ethnomedical specialists, apprenticeship patterns.	Ap
4	Providing an understanding of the stages patients go through in seeking traditional healing and includes rituals related to inviting healing forces, therapeutic actions, prevention, and expressions of gratitude. Additionally.	Ap

Learning Objective (LO):

The aim of this course is to make students proficient in understanding of the concepts of growth, differentiation, maturation, and development, including genetic, environmental, and nutritional aspects. Evaluate the impact of growth programs and nutritional deficiencies on public health.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Explore foundational concepts of growth, differentiation, maturation, and development. They will explore the evolutionary context of human growth, grasp the lifespan perspective of development, and delve into the characteristics of major stages in the human life cycle, including prenatal and postnatal growth.	U
2	Comprehensive understanding of the multifaceted factors influencing human growth, the methodologies used to study growth, and the assessment of growth patterns. This knowledge is essential for individuals studying human biology, anthropology, and related fields, as it provides insights into the complex interplay between genetics, environment, and various influences on human development.	An
3	Students will explore segmental growth, techniques for analyzing human physique and body composition, the significance of age in growth studies, and various methods for assessing age, including dental age, skeletal age, and morphological age.	An
4	Explore the challenges associated with malnutrition, morbidity, mortality, infant mortality, and the role of maternal education and immunization programs in public health initiatives. This knowledge is valuable for those pursuing studies in public health, nutrition, and related fields.	Ap

Learning Objective (LO):

The objective of this course is to develop a profound comprehension of the ecological perspectives to address environmental issues and contribute to sustainable development and understand the complex relationships between human societies, cultures, and the environment. Analyze the historical development and major branches of ecological anthropology.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Explain comprehensive understanding of ecological anthropology, its historical context, major branches, and its dynamic relationship with other disciplines. This knowledge is valuable for individuals interested in studying the complex interactions between human societies and their environments.	U
2	Describe the intellectual history of ecological anthropology, understanding how it emerged as a reaction to deterministic explanations, unilineal evolution, and abstract conceptualizations of culture.	Ap
3	Students will gain a comprehensive understanding of ecological principles, cultural ecology, and the ways in which human societies interact with and adapt to their environments.	Ap
4	Explore the role of ecological anthropology in addressing environmental problems, contributing to the broader field of environmental studies and activism. This knowledge is valuable for individuals interested in the interdisciplinary aspects of anthropology, environmental science, and sustainable development.	Ap

CL: Cognitive Levels (R-Remember; U-Understanding; Ap-Apply; An-Analyze; E-Evaluate; C-Create).

Learning Objective (LO):

A deep and comprehensive understanding of the Indian Society in its historical and socio-cultural context. Gain an insight into the social structure of the Indian society and study it with reference to the Varna, Caste system, tribal communities. Trace, examine and analyse the changes occurring in the society along with the contemporary changes. Discuss the contributions of various scholars in the study of the Indian society.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Explore the diverse historical, social, and cultural elements that have shaped the Indian subcontinent, providing a foundation for understanding the complexities and nuances of Indian civilization.	U
2	Describe intricate social fabric of India, including its caste dynamics, rural-urban interplay, and the role of reform movements and leaders in shaping societal structures. This knowledge is valuable for individuals interested in sociology, anthropology, and Indian studies.	An
3	Analyse the various processes and theories that contribute to socio-cultural change, both within indigenous societies and in response to external influences.	An
4	Discuss and critically evaluate the contributions of anthropologists in the field of anthropology in India.	E

Learning Objective (LO):

The objective of the course is to provide students a comprehensive understanding of ethnomedicine, including its cultural, spiritual, and ritualistic aspects. They should be able to analyze and interpret various ethnomedical practices, considering the diverse perspectives on health and healing within different cultural contexts.

Course Outcomes (CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Students will gain a nuanced understanding of ethnomedicine, disease, illness, health, and sickness. The course explores how these concepts are shaped by cultural, social, and historical factors, emphasizing the importance of cultural perspectives in understanding health and healing practices within diverse communities.	U
2	Explore the cultural perceptions of body image and the multifaceted symbolism associated with the human body in natural, social, cosmological, political, and spiritual contexts. This knowledge is crucial for understanding health and healing practices within diverse cultural frameworks.	Ap
3	Identify and explain of traditional health care practices, including beliefs and practices related to mother and child health. They will explore the roles of traditional medical practitioners, different types of ethnomedical specialists, apprenticeship patterns, and the use of medicinal plants, animal derivatives, minerals, and other therapeutic approaches in diverse cultural contexts.	Ap
4	Describe the cultural dimensions of healing and therapy through the study of rituals. This includes rituals related to inviting healing forces, therapeutic actions, prevention, and expressions of gratitude. Additionally, the course covers the ethnomedical pathway, providing an understanding of the stage's patients go through in seeking traditional healing.	Ap

M.A/M.Sc.	Anthropology	1	I
Course Code	Course Title		Course Type
ANTH430	Anthropology of Crime and Criminology		Core
Credit	Hours Per Week (L-T-P)		
	L	T	P
2	2	-	2
Maximum Marks	CIA		ESE
100	30		70

* L- Lecture, T- Tutorial, P- Practical

Learning Objective (LO):

1. To apply cultural relativism to understand outlaw and law enforcement cultures from an emic perspective.
2. To critically evaluate the consequences of public policy and law enforcement strategies, both intended and unintended.
3. To discuss issues of research methods and research ethics with populations with highly vulnerable, possibly dangerous and highly politicized research populations and writing about said research for a variety of audiences. Anthropology 3533 Anth. of Crime and Crim. Syllabus Spring 2021 2
4. To apply anthropological theory to ethnographic material, especially in regard to concerns of power, inequality, and health. • To improve academic reading comprehension, summarization skills, analytical skills and presentation skills • To practice taking on the world view of others and self reflexively challenge one's own worldview and biases
5. To practice critical thinking and collegial discussion
6. To improve academic writing and editing skills through drafting, reviewing and revising written works.

Course Outcomes(CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	The anthropological understanding of crime, criminalization processes, and the various cultural and social factors that influence criminal behavior. The syllabus also touches on gender dynamics, organized crime, and the interactions between anthropology, law enforcement, and private security.	Ap
2	The historical development of anthropological approaches to crime, the debunking of criminological myths, and the multifaceted study of criminals encompassing physical, mental, and demographic aspects. The syllabus also explores the influence of environmental factors, heredity, and cultural variations in the understanding of crime and justice.	Ap
3	Students will gain a comprehensive understanding of the origins and diverse theoretical perspectives within the field of criminology. The syllabus emphasizes the interdisciplinary nature of criminology and introduces students to various schools of thought that have shaped the study of criminal behavior.	U
4	Students will gain a comprehensive understanding of the conceptualization of crime, the psychological aspects of criminal behavior, strategies for crime prevention, the legal framework governing social prevention, and various institutions within the criminal justice system.	An

7. To improve academic writing and editing skills through drafting, reviewing and revising written works.

Course Outcomes(CO):

CO No.	Expected Course Outcomes	CL
	At the end of the course, the students will be able to:	
1	Explain the historical development of Dermatoglyphics, its applications in various fields, and the role it plays in resolving paternity disputes. Additionally, the syllabus addresses the evolving trends and comparative aspects of Dermatoglyphics, providing students with a comprehensive understanding of this specialized field.	Ap
2	Describe the specific features, classification, and inheritance patterns associated with palm prints. The syllabus addresses the practical aspects of identification and typology, providing students with the knowledge needed to analyze and interpret palm prints in forensic and anthropological applications.	Ap
3	Understanding of the practical aspects of fingerprint analysis, including identification, classification, ridge counting, and quantitative measures. The syllabus addresses both the theoretical and applied aspects of fingerprint examination, preparing students for practical applications in forensic science and anthropology.	U
4	The practical aspects of sole print analysis, including identification, classification, genetic inheritance, and the unique characteristics of toe prints. This knowledge is crucial for forensic science and anthropology, providing students with the skills needed for practical applications in these fields.	An

Detailed Syllabus: ANTH 440- Dermatology and Dermatoglyphics

Unit No.	Topics	No. of Lectures	CO No.
I	<ul style="list-style-type: none"> • Early history & development of Dermatoglyphics; Development of ridges • Scope and importance of Dermatoglyphics in various field • Uses of Dermatoglyphics in Paternity Disputes -Recent trends in Dermatoglyphics • Comparative Dermatoglyphics and Population Variations. 	4	I
II	<ul style="list-style-type: none"> • Palm prints: Identification, Typology • Main Line formula, Main Line Index and Transversality • atd angle and flexion creases. • Mode of Inheritance of Main Lines D, C, B & A and the Patterns on the configurational areas of Palm. 		II
III	<ul style="list-style-type: none"> • Finger prints: Identification, Typology. • Ridge counting • Pattern intensity Index, Furuhata Index and Dankmeijer's index. • Mode of Inheritance of Finger prints. 		III
IV	<ul style="list-style-type: none"> • Sole Prints : Identification, Typology. • Main Line Formula, Main Line Index and Transversality • Mode of Inheritance of sole print • Identification of Toe prints. 		IV

Recommended Readings:

1. Fingerprints, Palms and Soles- An Introduction to Dermatoglyphics. Harold Cummins and Charles Midlo. (1961) Dover Publications
2. Fingerprints. Francis Galton. MacMillan and Co., London. (1895), Paper Back June 2008.
3. Singh, I.P. Bhasin, M.K. Anthropometry. Bharti Bhawan, New Delhi.

Practical/ Project

Dematoglyphics: Qualitative and Quantitative analysis:

- i. Palmar Print: Identification, Main line formula, main line Index, atd angle, Indices
- ii Finger Print: Identification of pattern types: Arch, Loop, Whorl and Composites, Ridge counting
- iii Sole Print: Identification of pattern types
- iv Toe Print: Identification of pattern types

Note: Dermatoglyphic prints of 05 specimens to be collected and analysed by each student in the above mentioned traits.

Learning Objective(LO):

The objective of the course is to provide students a comprehensive understanding of human growth and development, factors influencing growth, nutrition concepts, and the evaluation of nutritional status. They should also be familiar with various programs and initiatives addressing malnutrition and health-related issues in India.

Course Outcomes(CO):

CO No.	Expected Course Outcomes	CL
1	At the end of the course, the students will be able to: Explain the diverse and intricate aspects related to tribes, both globally and specifically in the Indian context. The study encompasses historical perspectives, classifications, and the characteristics that define tribes in various regions.	U

2	Describe the diverse theories and perspectives on tribal development, ethical considerations in cultural relativism, and various research methodologies employed in anthropological studies related to tribal communities in India.	Ap
3	Students will gain a foundational understanding of Biological Anthropology, including its historical context, key theories of evolution, and principles of inheritance. The exploration of Lamarckism, Darwinism, and the Synthetic Theory provides a comprehensive view of the evolutionary concepts that form the basis of the discipline.	U
4	Describe the methods, patterns, and practical applications of human genetics, ranging from understanding inheritance patterns to exploring the ethical considerations in genetic practices.	Ap

CL : Cognitive Levels (R-Remember; U-Understanding; Ap-Apply; An-Analyze; E-Evaluate; C-Create).
